---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Sample containers were received partially frozen.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 7.6°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

**Report Definitions:**  
 RL - Analyte reporting limit.  
 QCL - Quality control limit.  
 L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
 ND - Not detected at the reporting limit.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 5.4°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

For all the samples, the collection date indicated on the sample container label is 1/26/16 and on the Chain of Custody it's 1/27/16. Proceeded with the collection date/time as indicated on the Chain of Custody.

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

# ANALYTICAL SUMMARY REPORT

March 03, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16021748      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:36

Energy Laboratories Inc Billings MT received the following 4 samples for Tintina Montana Inc on 2/24/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16021748-001	USZ Comp	02/23/16 9:00	02/24/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved
B16021748-002	Yc Comp	02/23/16 9:00	02/24/16	Aqueous	Same As Above
B16021748-003	Tailings	02/23/16 9:00	02/24/16	Aqueous	Same As Above
B16021748-004	Tailings (Saturated)	02/23/16 9:00	02/24/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 5.4°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

March 16, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16030817      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:38

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 3/9/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16030817-001	Yc Comp	03/08/16 9:00	03/09/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 7.4°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

March 18, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16030820      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:36

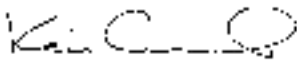

Energy Laboratories Inc Billings MT received the following 2 samples for Tintina Montana Inc on 3/9/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16030820-001	Ynl B Comp	03/08/16 9:00	03/09/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved
B16030820-002	LZ FW Comp	03/08/16 9:00	03/09/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:   
Supervisor, Wet Chemistry

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

The collection date and time for LZ FW Comp was recorded from the container labels.

# ANALYTICAL SUMMARY REPORT

April 01, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16031893      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:40

Energy Laboratories Inc Billings MT received the following 3 samples for Tintina Montana Inc on 3/23/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16031893-001	USZ Comp	03/22/16 9:00	03/23/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved
B16031893-002	Tailings	03/22/16 9:00	03/23/16	Aqueous	Same As Above
B16031893-003	Tailings (Saturated)	03/22/16 9:00	03/23/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

None

# ANALYTICAL SUMMARY REPORT

April 13, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16040426      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:40

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 4/6/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16040426-001	LZ FW Comp	04/05/16 9:00	04/06/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

# ANALYTICAL SUMMARY REPORT

April 29, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16041643      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:44

Energy Laboratories Inc Billings MT received the following 3 samples for Tintina Montana Inc on 4/20/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16041643-001	USZ Comp	04/19/16 9:00	04/20/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved
B16041643-002	Tailings	04/19/16 9:00	04/20/16	Aqueous	Same As Above
B16041643-003	Tailings (Saturated)	04/19/16 9:00	04/20/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

- Custody seals intact on all sample bottles? Yes  No  Not Present
- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 7.6°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

None

# ANALYTICAL SUMMARY REPORT

May 11, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16050324      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK: 44

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 5/4/2016 for analysis.

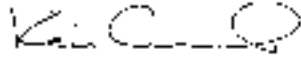

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16050324-001	LZ FW Comp	05/03/16 9:00	05/04/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

June 02, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16051110      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK: 47

Energy Laboratories Inc Billings MT received the following 2 samples for Tintina Montana Inc on 5/13/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16051110-001	Tailings	05/10/16 9:00	05/13/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved
B16051110-002	Tailings (Saturated)	05/10/16 9:00	05/13/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:   
Supervisor, Wet Chemistry

**Report Definitions:**  
 RL - Analyte reporting limit.  
 QCL - Quality control limit.  
 L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
 ND - Not detected at the reporting limit.

- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 5.9°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 5.6°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

June 10, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16060096      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:48

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 6/1/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16060096-001	LZ FW Comp	05/31/16 9:00	06/01/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 10.2°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

June 22, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16061332      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 Wk:52

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 6/15/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16061332-001	USZ Comp	06/14/16 9:00	06/15/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

In certain circumstances, samples submitted to Energy Laboratories, Inc. may be subcontracted to other certified laboratories in order to complete the analysis requested. This serves as notice of this possibility. All sub-contract data will be clearly notated on your analytical report. Visit our web site at [www.energylab.com](http://www.energylab.com) for additional information, downloadable fee schedule, forms, and links.

# ANALYTICAL SUMMARY REPORT

July 13, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16062414      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:52

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 6/29/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16062414-001	LZ FW Comp	06/28/16 9:00	06/29/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

  
Supervisor, Wet Chemistry

Digitally signed by  
Keri Conter  
Date: 2016.07.13 10:22:52 -06:00

**CLIENT:** Tintina Montana Inc  
**Project:** 3767-01 WK:52  
**Work Order:** B16062414

**Report Date:** 07/13/16

## **CASE NARRATIVE**

---

Tests associated with analyst identified as ELI-H were subcontracted to Energy Laboratories, 3161 East Lyndale Ave, Helena, MT, EPA Number MT00945.

Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

July 21, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16070910      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:56

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 7/13/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16070910-001	USZ Comp	07/12/16 9:00	07/13/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 2.6°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

August 03, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16072122      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK:56

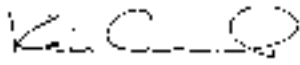

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 7/27/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16072122-001	LZ FW Comp	07/26/16 9:00	07/27/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 7.8°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

August 17, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16081032      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK: 60

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 8/10/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16081032-001	USZ Comp	08/09/16 9:00	08/10/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

  
Supervisor, Wet Chemistry

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

September 16, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16090514      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK: 64

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 9/7/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16090514-001	USZ Comp	09/06/16 9:00	09/07/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

- Custody seals intact on all sample bottles? Yes  No  Not Present
- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 5.4°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

None

# ANALYTICAL SUMMARY REPORT

October 14, 2016

Tintina Montana Inc  
PO Box 48736 Bentall  
Vancouver, BC V7X 1A6

Work Order: B16100376      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK: 68

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 10/5/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16100376-001	USZ Comp	10/04/16 9:00	10/05/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 2.2°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

# ANALYTICAL SUMMARY REPORT

November 10, 2016

Tintina Montana Inc  
PO Box 431  
White Sulfur Springs, MT 59645-0431

Work Order: B16110233      Quote ID: B2868 - Tintina Project  
Project Name: 3767-01 WK: 72

Energy Laboratories Inc Billings MT received the following 1 sample for Tintina Montana Inc on 11/2/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16110233-001	USZ Comp	11/01/16 9:00	11/02/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Fluoride Anions by Ion Chromatography Digestion, Mercury by CVAA Digestion, Total P Phosphorus, Total Dissolved

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 8.6°C On Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

**To:** 'josh.rhew@alsglobal.com'  
**Cc:** Mike Medina (mmedina@mettest.com)  
**Subject:** Request for samples  
**Attachments:** 3767-01 instr to ALS 5-22-15.pdf

Hi Josh,

In connection with the above-mentioned and pursuant to our telephone conversation, please find attached a copy of instructions dated May 13, 2015, from Enviromin Inc., to ALS Geochemistry, Attention: Chuck Whipple. The instructions ask that weighted splits be taken from the reject mass and forwarded to McClelland Laboratories, Inc. The samples were received at MLI yesterday, however, we received pulps instead of the weighted reject material. Please pull all remaining reject material for the samples listed in the clients instructions and deliver them to MLI or contact the undersigned when they are ready and we will send someone to pick them up.

As per our conversation, this is a rush request and we would appreciate you giving it your immediate attention with the hope that we might be able to get them today. Thank you in advance for your cooperation.

Regards,

*Laurie Hartley*

RE: Request for Sample Shipment to McClelland Laboratories  
Tintina Black Butte Copper Project

Enviromin, on behalf of Tintina Resources, is requesting the shipment of samples that have been previously tested and archived at ALS Laboratories. **Table 1** on the following page shows the sample IDs, ALS job number, available reject weight from previous testing, and the requested mass for the splits (in grams) for shipment. Please ship the indicated mass of each of the samples listed in **Table 1** on the following page to McClelland Laboratories:

Mr. Mike Medina  
McClelland Laboratories  
1016 Greg Street.  
Sparks, Nevada 89431  
(775) 356-1300

Please confirm the shipment of these samples with Lisa Kirk: [lkirk@montana.com](mailto:lkirk@montana.com).  
Please Cc Lauren Bozeman: [lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com)

Please contact Lauren Bozeman at (406) 600-6086 with any questions regarding these instructions.

Tintina Resources can be billed directly for the preparation and shipment of the samples.

The following pages are lab instructions for McClelland Laboratories to be included with the sample shipment.

RE: Request for Initiation of Kinetic Testing for 3 Composite Samples  
 Black Butte Copper Project

Tintina plans to initiate kinetic testing on composited samples from these units: *Yc*, *Ynl B* and the *USZ*. We request that McClelland create these composites with the subsamples listed in **Table 1** upon receiving samples.

Table 1. Samples for HCT Composites for Kinetic Testing

As we have done previously for Montana projects, due to the need for low level metal analysis in accordance with Montana DEQ 7 (see Table 2), we request that McClelland Laboratories use disposable 0.45µm filters during sample collection in weeks 0, 1, 2, 4, 8, 12, 16, 20 and that samples be shipped for analysis to:

Energy Laboratories  
 1120 South 27th Street (59101)  
 PO Box 30916  
 Billings, MT 59107-0916  
 1-800-735-4489

**Table 2. Trace element parameters recommended by DEQ for leachate analysis following proposed humidity cell testing, Tintina project**

#### **Asbestiform Mineral Characterization**

A representative 100 to 200 gram aliquot of the Chamberlain (Yc) composite sample should be sealed in double zip-lock bags and labeled with the composite identification (Yc-Comp). This sample is to be shipped to the RJ Lee Group for analysis of potential asbestiform mineral content. Please ship these samples, under chain-of-custody with the attached analytical request, to the following address:

Mr. Bill Powers, Manager of Optical Group  
 RJ Lee Group  
 350 Hochberg Road  
 Monroeville, PA 151446  
 (724) 325-1776

Tintina Resources should be billed directly for all testing.

All results should be reported to Lisa Kirk of Enviromin: [lkirk@montana.com](mailto:lkirk@montana.com).

Copy Katie Seipel ([seipel.k@gmail.com](mailto:seipel.k@gmail.com)) and Lauren Bozeman ([lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com)) for all results and related correspondence

Enviromin can provide Chain of Custody for the RJ Lee Optical Group to Energy Laboratories if required. Contact Lauren Bozeman ([lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com)) or at 406-600-6086) for access to this document.

If you have any questions about these instructions, please contact Lauren Bozeman at (406) 600-6086.

Please include the following lab instructions upon shipment to RJ Lee Group:

1807 W. Dickerson, Suite D  
 P.O. Box 1685  
 Bozeman, MT 59771  
 (406) 581-8261

RE: Analytical Request for PLM/TEM Analyses  
 Tintina Black Butte Copper Project

Please find enclosed 1 composite rock sample of Yc-Comp collected drill core. Please conduct the following analysis for Tintina's Black Butte Geochemical Baseline Study

**PLM Analysis**

The RJ Lee Group will document the relative abundance of the minerals listed in Table 1 using Polarized Light Microscopy (PLM) methods at a 400 point count (0.25 %) level of analysis. Montana Department of Environmental Quality requires that a specific description of the criteria used to define asbestiform fibers, based on the regulations provided in EPA-600/R-93/116, be provided by the PLM analysis.

**Table 1. List of minerals for analysis.**

Asbestiform Minerals	Group	Chemical Formula
Chrysotile	Serpentine	$Mg_3Si_2(OH)_4$
Amosite	Amphibole	$(Mg, Fe)_2Al_4Si_5O_{18} \cdot nH_2O$
Crocidolite	Amphibole	$NaFe_3^{2+}Fe_2^{3+}Si_8O_{22}(OH)_2$
Anthophyllite	Amphibole	$(Mg, Fe)_7Si_8O_{22}(OH)_2$
Tremolite	Amphibole	$Ca_2Mg_5Si_8O_{22}(OH)_2$
Actinolite	Amphibole	$Ca_2(Mg, Fe)_5Si_8O_{22}(OH)_2$

Turnaround time for PLM analysis from receipt of samples should be within 2 weeks. **Prior to any further analysis**, results of PLM analysis are to be submitted (email) to:

Lisa Kirk at [lkirk@montana.com](mailto:lkirk@montana.com)

Copy Katie Seipel ([seipel.k@gmail.com](mailto:seipel.k@gmail.com)) and Lauren Bozeman ([lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com)) for all results and related correspondence

### **TEM Analysis**

Transmission Electron Microscopic (TEM) analysis of samples with uncertain or demonstrated asbestiform mineral content in PLM analyses may be required of the RJ Lee Group. This work should include distinction of mineral cleavage and fibers, and will be supported by element analysis using EDS and phase identification using SAED as appropriate. Detection limits for this analysis may vary depending upon material matrix, between 0.001 and 0.1 weight percent. Detection limit will be documented for each analysis, and will not exceed 0.1 wt percent unless verified with Lisa Kirk (406) 581-8261. Assuming that few if any of the samples will be studied using TEM, two week turnaround from notice to proceed on TEM analysis is expected. **TEM analysis should only proceed on direction of Dr. Kirk**

Please contact Lisa Kirk with questions at (406) 581-8261 or at [lkirk@montana.com](mailto:lkirk@montana.com)

Tintina Resources should be billed directly for all testing.

Please find the Chain of Custody for RJ Lee Group enclosed in the instructions for shipment to RJ Lee Group.

Hi Josh,

I'm off at 3:00 P.M. today. Please leave me a voicemail message or send me an email when the rejects are ready to pick up and I will have someone there first thing Monday morning. Thank you.

Regards,

*Laurie Hartley*

Re: Acid-Base Accounting and Net Acid Generation Tests  
Tintina Resources, Black Butte Copper Project

Enviromin is currently preparing to conduct acid-base accounting (ABA) and net acid generation (NAG) tests on 15 samples from one unit (LZ-FW) for Tintina's Black Butte Copper Project. This memo summarizes the specific samples we would like to include, as well as our analysis requests. The samples listed in Table 1 are currently in storage at ALS. Enviromin requests that ALS pull archived coarse reject to conduct these tests.

The following summarizes Enviromin's requests for processing of these samples:

- 225 gram split (coarse reject) weighted and shipped to McClelland Laboratories
- Preparation package: Prep-31
- ABA package: ABA-PKG03 (Modified)
- NAG package: OA-VOL11
- Reject weights: WEI-25

Please immediately ship splits to McClelland Laboratories at the following address and include the attached memo to McClelland Laboratories in the shipment:

Mr. Mike Medina  
McClelland Laboratories  
1016 Greg Street.  
Sparks, Nevada 89431  
(775) 356-1300

Please confirm the following with Enviromin:

- Receipt and clarity of these instructions;
- Success or difficulties locating samples in ALS Laboratories warehouse; and
- Shipment of splits to McClelland Laboratories

All correspondence should be directed to Kate Seipel at (406) 539-2780 or at [seipel.k@gmail.com](mailto:seipel.k@gmail.com) and should be Cc'ed to Lisa Kirk: [lkirk@montana.com](mailto:lkirk@montana.com) and Lauren Bozeman: [lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com).

RE: Request for Initiation of Kinetic Testing for 1 Composite Sample  
Black Butte Copper Project

Tintina plans to initiate kinetic testing on a composited sample from a newly defined waste unit known as the Lower Zone Footwall (LZ-FW). We request that McClelland create this composite from the subsamples listed in **Table 1**, which are included with this memo.

All correspondence, including confirmation of sample receipt, and results of testing should be directed to Katie Seipel (406-539-2780) at [seipel.k@gmail.com](mailto:seipel.k@gmail.com) and should be copied to Lisa Kirk: [lkirk@montana.com](mailto:lkirk@montana.com) and Lauren Bozeman: [lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com). Tintina Resources should be billed directly for all testing.

**Asbestiform Mineral Characterization**

A representative 100 to 200 gram aliquot of the LZFW composite sample should be sealed in double zip-lock bags and labeled with the composite identification (LZFW-Comp). This sample is to be shipped to the RJ Lee Group for analysis of potential asbestiform mineral content. Please ship these samples, under chain-of-custody with the attached analytical request, to the following address:

Mr. Bill Powers, Manager of Optical Group  
RJ Lee Group  
350 Hochberg Road  
Monroeville, PA 151446  
(724) 325-1776

Enviromin can provide Chain of Custody for the RJ Lee Optical Group to Energy Laboratories if required. Contact Lauren Bozeman ([lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com) or at 406-600-6086) for access to this document.

Please include the following lab instructions upon shipment to RJ Lee Group:

10 June 2015

To: Mr. Bill Powers, Manager of Optical Group  
RJ Lee Group  
350 Hochberg Road  
Monroeville, PA 151446

RE: Analytical Request for PLM/TEM Analyses  
Tintina Black Butte Copper Project

Please find enclosed **1** composite rock sample, "LZFW-Comp." Please conduct the following analysis for Tintina's Black Butte Geochemical Baseline Study.

#### PLM Analysis

Please document the relative abundance of the minerals listed in Table 1 using Polarized Light Microscopy (PLM) methods at a 400 point count (0.25 %) level of analysis. Montana Department of Environmental Quality requires that a specific description of the criteria used to define asbestiform fibers, based on the regulations provided in EPA-600\R-93\116, be provided by the PLM analysis.

**Table 1. List of minerals for analysis.**

Asbestiform Minerals	Group	Chemical Formula
Chrysotile	Serpentine	$Mg_3Si_2(OH)_4$
Amosite	Amphibole	$(Mg, Fe)_2Al_4Si_5O_{18} \cdot nH_2O$
Crocidolite	Amphibole	$NaFe_3^{2+}Fe_2^{3+}Si_8O_{22}(OH)_2$
Anthophyllite	Amphibole	$(Mg, Fe)_7Si_8O_{22}(OH)_2$
Tremolite	Amphibole	$Ca_2Mg_5Si_8O_{22}(OH)_2$
Actinolite	Amphibole	$Ca_2(Mg, Fe)_5Si_8O_{22}(OH)_2$

Turnaround time for PLM analysis from receipt of samples should be within 2 weeks. **Prior to any further analysis**, results of PLM analysis are to be submitted (via email) to:

Lisa Kirk: [lkirk@montana.com](mailto:lkirk@montana.com) and should be copied to Katie Seipel ([seipel.k@gmail.com](mailto:seipel.k@gmail.com)) and Lauren Bozeman ([lauren.enviromin@gmail.com](mailto:lauren.enviromin@gmail.com)). All results and related correspondence should be handled in this way.

### **TEM Analysis**

Transmission Electron Microscopic (TEM) analysis of samples with uncertain or demonstrated asbestiform mineral content in PLM analyses may be required of the RJ Lee Group. This work should include distinction of mineral cleavage and fibers, and will be supported by element analysis using EDS and phase identification using SAED as appropriate. Detection limits for this analysis may vary depending upon material matrix, between 0.001 and 0.1 weight percent. Detection limit will be documented for each analysis, and will not exceed 0.1 wt percent unless verified with Lisa Kirk ((406) 581-8261). Assuming that few if any of the samples will be studied using TEM, two week turnaround from notice to proceed on TEM analysis is expected. **TEM analysis should only proceed on direction of Dr. Kirk**

Please contact Lisa Kirk with questions at (406) 581-8261 or at lkirk@montana.com

Tintina Resources should be billed directly for all testing.

Please find the Chain of Custody for RJ Lee Group enclosed in the instructions for shipment to RJ Lee Group.

## **EXECUTIVE SUMMARY**

The Center for Advanced Mineral and Metallurgical Processing (CAMP) received four (4) samples for mineralogical characterization on September 19, 2013 from Lisa Kirk of Enviromin, on behalf of Tintina Black Butte Copper. The samples received were material from kinetic humidity cell tests and represented four lithotypes encountered in the Johnny Lee 2012 decline, including:

- Upper Sulfide Zone (*USZ*) – sample collected after 24 weeks of HCT,
- Lower Newland dolomite (*Ynl O*) – sample collected after 24 weeks of HCT,
- Undifferentiated Lower Newland (*Ynl*) – sample collected after 33 weeks of HCT, and
- Lower Newland basal conglomerate (*Ynl B*) – sample collected after 33 weeks of HCT.

The objective of the analysis was to determine the mineralogy of the materials that could explain the elevated metals and/or sulfate release in the humidity cell test effluent observed during the initial weeks of operation (Enviromin, 2013) and to identify mineral(s) that may be responsible for the release of thallium from the *Ynl* humidity cell, which continued to exceed Montana Water Quality Standards throughout the test.

Specimens were prepared from the -100 mesh material, as it was suspected that this size fraction would be the largest contributor of metals to the humidity cell effluent since the finer particles have more surface area; hence, more potential for leaching. Mineral Liberation Analysis (MLA) by scanning electron microscope-electron dispersive spectroscopy (SEM-EDS) was used to determine modal mineralogy.

Mineralogy by MLA determined that the *USZ* was 46% pyrite, 19% quartz, 17% dolomite, 10% K-mica, 5% potassium feldspar, 2% iron oxide, and 2% biotite. The *Ynl B* mineralogy was 41% quartz, 29% dolomite, 20% K-mica, and 4% potassium feldspar. *Ynl O* consisted of 75% dolomite, 19% quartz, 4% K-mica, and 1% potassium feldspar. Finally, *Ynl* contained 31% quartz, 25% mica, 18% dolomite, 11% pyrite, 10% potassium feldspar, 2% biotite, and 1% barite.

Sparse phase liberation (SPL), a trace mineral technique, was used to attempt to locate thallium-containing sulfides and selenides; however, none were encountered. Also, X-ray mapping was implemented on the *Ynl* specimen to determine its feasibility to detect trace amounts of thallium in pyrite and the potassium silicates, but false contrast due to continuum-induced effects prevented detection. Since the thallium-bearing minerals/phases eluded detection by MLA and microanalysis techniques, it seems likely that thallium is present as a trace constituent in one of the major or minor phases. It has been found that thallium can occur as a cationic substitution for potassium in the aluminosilicates (e.g., mica/sericite, K Feldspar) or as a trace impurity in the sulfides (e.g., pyrite, sphalerite) or both. To attempt to answer this question, a sub-task was undertaken involving partitioning particles from an unweathered *Ynl* specimen into two

density fractions using heavy liquid separation (HLS). Analysis of the fractions for trace elements revealed that thallium was enriched in the dense mineral fraction that was composed of nearly 80% pyrite. This finding suggests that thallium may occur at trace levels in pyrite; however, it does not conclusively resolve the source of leachable thallium, as enough thallium was present in the silicate/carbonate fraction to be a potential source in leachates.

***Qualifying Statement***

*This confidential report was prepared for Enviromin and is based on information available at the time of the report preparation. It is believed the information, estimates, conclusions and recommendations contained herein are reliable under the conditions and subject to the qualifications set forth. Furthermore, the information, estimates, conclusions and recommendations are based on the experience of CAMP and data supplied by others, but the actual result of the work is dependent, in part, on factors over which CAMP has no control.*

## **Introduction**

As a part of its efforts to permit exploration of the Johnny Lee 2012 Decline, Tintina Black Butte Copper independently initiated kinetic humidity cell testing of the four major lithotypes that would be excavated during this operation including the Upper Sulfide Zone (*USZ*), a massive sulfide ore body: the Lower Newland dolomite (*Ynl O*); Lower Newland basal conglomerate (*Ynl B*); and undifferentiated Lower Newland (*Ynl*).

The humidity cell tests showed relatively high metal release in effluents collected during the early weeks of testing, which tapered off in subsequent weeks; however, thallium, a contaminant of concern due to its high toxicity, persisted in the effluents of the *Ynl* and *USZ* humidity cells (Enviromin, 2013). Therefore, thallium-bearing minerals and/or thallium-substituted phases were of key interest in the study.

Typically, thallium occurs in trace amounts in the natural environment with the two most common thallium-bearing minerals being lorandite ( $\text{TlAsS}_2$ ) and crookesite [ $\text{Cu}_7(\text{Tl,Ag})\text{Se}_4$ ]. Thallium behaves as a lithophile and occurs naturally in soils primarily as  $\text{Tl}^+$  and substitutes for potassium ions ( $\text{K}^+$ ) in feldspars and micas. Thallium also displays chalcophile characteristics and has been found to occur with sulfides such as pyrite, sphalerite, and galena (Madejón, 2013). As a potassium analog, thallium can be readily mobilized during weathering.

## **Experimental Work and Results**

As previously mentioned, the humidity cell tests displayed relatively large metal release during the initial stages of the study. It is likely that the easily leachable metals found in the initial effluents originated from fine particle-sized material (present as a result of material preparation) since the finer particles offer more surface area per unit mass than the larger particles, resulting in higher leaching potential. For this reason, the as-received material from the humidity test cells was dry-sieved through a 100 US mesh screen to separate the fine, -100 mesh, fraction from the coarse, +100 mesh, fraction. Because the fine fraction of the materials likely triggered the elevated metals observed in the early stages testing, the finer, -100 mesh, material was selected for mineralogical characterization.

Non-oriented specimens of the -100 mesh material were prepared by standard cold epoxy mounting methods for SEM-MLA analysis. The MLA method X-ray Backscattered Electron (XBSE) was used to determine mineral content of the prepared specimens, which were subsequently analyzed using the MLA Sparse Phase Liberation (SPL) method to determine additional sulfide/selenide minerals that could potentially contain

thallium-bearing species. The XBSE method relies on the variation in the gray level of the backscattered electrons (BSE) to differentiate (segment) particles and mineral phases, as it is affected by mineral phase compositions. X-rays are acquired for each particle and each individual phase in a multiphase particle. The X-ray spectra are then compared to the mineral X-ray database to identify the minerals present. Modal mineralogical results are determined by an algorithm that utilizes the MLA-determined mineral surface area and corresponding density.

MLA SPL was implemented to identify particles containing phases that have high average atomic numbers. Since thallium ( $z=81$ ) has a high atomic number, phases that contain thallium, as well as any thallium-containing sulfides or selenides that may be present in the specimens, would exhibit high average atomic numbers and would, therefore, be identified by this method. Additionally, since this method ignores minerals with low gray level intensities, mainly silicates and carbonates, many more particles are examined than by MLA XBSE.

All MLA analyses were performed on the LEO 1430 VP Scanning Electron Microscope (SEM) coupled with two energy-dispersive spectroscopy (EDS) detectors [Ametek Apollo 40 silicon drift detectors (SDD)]. Data were acquired automatically using the MLA software, followed by a more detailed examination by manual search with the SEM and collection of EDS spectra on selected particles/phases. The SEM was operated using an accelerating voltage of 25.0 kV at a working distance of 18 mm and a spot size of 600 to 625.

Results from the modal analysis (XBSE) and the trace mineral analysis (SPL) are presented in the following sections.

Additional analyses were performed on the *Ynl* specimen to attempt to determine the potential source of thallium. First, EDS X-ray mapping was investigated as a method for trace metal determination. Secondly, a specimen from unweathered *Ynl material* was separated using heavy liquid separation (HLS), and the fractions were submitted for elemental analysis and subjected to further MLA. An unweathered *Ynl* specimen was chosen for HLS because it would contain soluble thallium that would have been lost in the weathered specimen from HCT, and there was more unweathered material available for the separation. For HLS, a portion of the *Ynl* sample was wet-sieved through 100 and 400 US mesh screens. Approximately 30 grams of the -100/+400 mesh material was subjected to HLS using di-iodomethane (density = 3.3 g/ml), which resulted in 98.3% of the specimen reporting to the “float” fraction and 1.7% remaining in the “sink”. Both HLS fractions were submitted to ACME Labs (Vancouver, BC) for elemental analysis, which uses a multi-acid digestion consisting of HNO<sub>3</sub>, HClO<sub>4</sub>, HF, and HCl that is capable of decomposing most minerals, followed by analysis by ICP-MS. Additionally, HLS fractions were analyzed by MLA to verify the mineralogy following separation.

## **MLA Mineralogy of the -100 Mesh Fraction**

Modal mineralogical results of the -100 mesh sieve fractions from the four lithologies studied are presented below in Table 1. The specimens can be generally described by five major/minor mineral phases: pyrite, quartz, dolomite, mica (muscovite/sericite), and potassium feldspar.

Pyrite was the most prominent phase in the *USZ* (46% modally), which was described as a massive sulfide material. Other major and minor phases in the *USZ* were quartz (19%), dolomite (17%), mica (9.7%), and potassium feldspar (4.9%).

The composition of the *Ynl* was 31% quartz, 25% mica, 18% dolomite, 11% pyrite, and 9.7% potassium feldspar. The *Ynl* also exhibited the highest barite content of the four materials tested, at nearly 1%.

Conglomerate and shale from the basal portion of Lower Newland formation were the primary rock types in the *Ynl B* material, which was found to contain 41% quartz, 29% dolomite, 20% mica, 4% potassium feldspar, and less than 2% each of biotite, pyrite, and albite.

The *Ynl O* material, from the dolomitic interbed of the Lower Newland shale, contained the most dolomite and least pyrite of all four materials. Dolomite was 75% and pyrite was only 0.7%. Quartz and mica were the only other significant phases at 19 and 3.8%, respectively.

No distinct thallium-bearing minerals were encountered during MLA analysis.

## **MLA-Calculated Elemental Composition**

The MLA-calculated composition is a semi-quantitative result and a function of the assigned chemistry as defined in Table 1 and estimated mineral density.. No thallium-bearing minerals were identified; therefore, no results/concentrations for thallium are reported in Table 2.

Sulfur was greatest in the *USZ* specimen, where pyrite was the primary phase. Aside from oxygen, silicon was the primary element in *Ynl* and *Ynl B* specimens, in which quartz and mica are predominant. The elevated calcium and magnesium content observed for the *Ynl 0* specimen is a result of dolomite being the primary phase in that specimen.

**Table 2. MLA-Calculated elemental concentrations, by lithotype.**

<b>Element</b>	<b><i>USZ</i></b>	<b><i>Ynl</i></b>	<b><i>Ynl B</i></b>	<b><i>Ynl 0</i></b>
Oxygen	27.2	44.7	50.4	51.5

P – element-containing mineral encountered, calculated at less than 0.01%

ND – mineral, as defined, containing element not encountered

## **MLA Sparse Phase Liberation (SPL) Analysis**

The specimens were re-analyzed by MLA Sparse Phase Liberation (SPL) to attempt to find thallium-containing minerals/phases; however, none were encountered.

As previously mentioned, SPL is a selective technique where the sample is scanned for only “bright” particles. In this study, the SPL method was configured to ignore particles containing phases with BSE grey levels of less than 150, a threshold at which the carbonate and silicate minerals and pyrite gray levels would be eliminated, such that only

the minerals in particles containing phases with high gray level minerals (e.g., barite, galena) would be reported. The relatively “high” pyrite content shown, especially for the *USZ*, is a result of its occurrence in particles containing “bright” phases such as barite and/or galena.

Overall, barite was the most frequently found “bright” mineral in the samples as seen from the results tabulated in Table 3.

**Table 3. Relative mineral abundance from SPL analysis (Wt.%), by lithotype.**

# MLA False Color and Backscattered Electron (BSE) Images

In this section, selected MLA false color and backscattered electron images are presented to show the relationship between the classified images and the BSE images, as well as some of the textures encountered in the specimens.

## Undifferentiated Lower Newland Formation (Ynl)

The Lower Newland Formation is a highly carbonaceous, locally sulfidic black shale (Enviromin, 2013). The false color image of the -100 mesh material generated from the MLA (Figure 1) shows the major phases quartz (lt purple), mica (likely sericite) [lavender], dolomite (green), potassium feldspar (lt gray), and pyrite (olive). The second most abundant sulfide found in this specimen, sphalerite (pink), was present as several small inclusions in the highlighted mica particle in Figure 1.

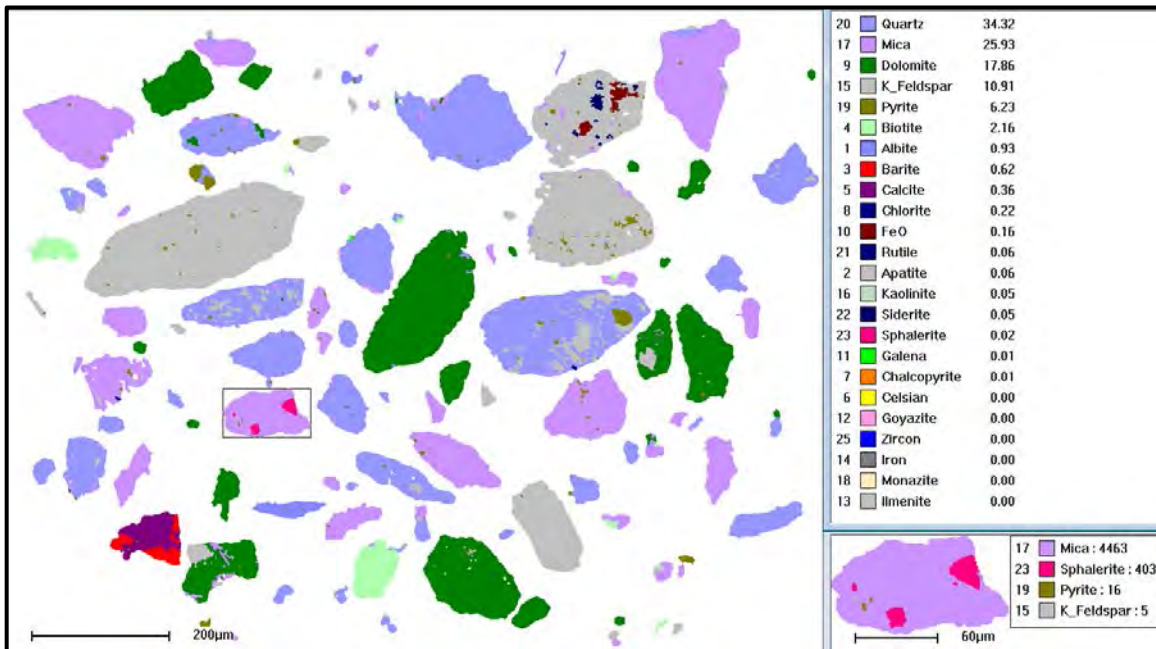

Figure 1. Classified MLA image from Ynl (-100 mesh). Particle inset shows mineral abundance in pixels and concentration palette shows mineral content in area percentage.

In Figure 2, sphalerite ( $z=25.4$ ) is “bright” in contrast to the mica ( $z=11.3$ ) due to its larger average atomic number ( $z$ ). The particles display mottling artifacts that are likely result from weathering in the *Ynl* humidity cell.

Figure 2. BSE image from *Ynl* (-100 mesh).

A particle composed of a silver-antimony sulfide, miargyrite ( $\text{AgSbS}_2$ ), chalcopyrite (Cpy), silver-bearing tetrahedrite (Tt), and pyrite (Py), was the only precious metal-containing particle encountered in the study (Figure 3), with the exception of trace amounts of silver in bornite, and possibly chalcocite, that were detected in the dense fraction examined during mineralogical determination of the thallium study.

**Figure 3. Sulfide particle containing miargyrite, chalcopyrite, tetrahedrite, and pyrite (Ynl).**

## **Thallium Department**

### ***EDS X-ray Mapping of Ynl***

The *Ynl* material released thallium throughout the duration of kinetic humidity cell testing. One objective of the MLA study was to determine the potential mineralogical source of the thallium. Because no discrete thallium minerals were encountered in the initial MLA, a portion of the *Ynl* specimen was mapped for several elements using EDS in an attempt to determine a candidate thallium-containing phase. EDS mapping is useful in determining major constituents; however, detection of trace elements using mapping can be compromised by artifacts of background continuum effects (Goldstein, 2003). In essence, an area that is being mapped for a trace element may produce a false contrast for that element when the mapping minerals phases of different compositions (i.e., different  $z$ -values). Background correction helps minimize the false contrast effect, but it cannot be entirely eliminated.

The BSE image for the region that was X-ray mapped is shown in Figure 4. The gray levels of the minerals in the BSE image reflect the composition or average atomic number ( $z$ ). In the BSE image below, we observe the following phases from darkest to brightest: the silicates and carbonates, with the lowest  $z$ -value phases ( $z=10.9$  to  $11.3$ ), followed by pyrite ( $z=20.7$ ), and then barite, with the greatest  $z$ -value ( $z=37.3$ ).

**Figure 4. BSE image of EDS mapped area (Ynl).**

The individual elemental X-ray maps for calcium, magnesium, silicon, potassium, sulfur, and thallium are shown below in Figure 5. Calcium indicates the presence of dolomite/calcite; magnesium is less definitive, showing where mica and dolomite occur; silicon appears to be blended with every phase except pyrite and barite; potassium appears to occur with silicon, except in the most pure quartz grains; sulfur is associated with pyrite in the blue region and with barite in the “faded” blue area; and thallium appears to be everywhere, even in the epoxy. The intensity of the aqua color in the thallium map appears to be related to the z-value of the phases, rendering the map suspicious. X-ray spectra were manually collected by EDS on the potassium silicates, pyrite, and barite with no indication of discernable deflections between the background continuum and the energy levels characteristic of thallium. Therefore, it was concluded that EDS X-ray mapping was not sensitive enough for the determination of trace thallium.

Figure 5. EDS elemental X-ray maps for the *Ynl*.

### ***Elemental Analysis of Fractionated Ynl Material***

Initial MLA studies were not able to identify the source of thallium in the *Ynl* specimen despite clear evidence of thallium in kinetic humidity cell test effluent. Therefore an additional test was performed to further elucidate possible sources of thallium in this material. The initial MLA studies determined that the *Ynl* specimen was approximately 90% combined silicates and carbonates and 10% pyrite. Generally, thallium is thought to behave as a chalcophile, where it is often suspected to exist as a trace metal in sulfide minerals, namely pyrite; however, it also has the ability to occur as a lithophile, substituting for potassium in potassic minerals, such as potassium feldspars and micas. The use of heavy liquids is a common mineral separation technique used to partition sulfide minerals from gangue materials. Conceptually, HLS would separate the *Ynl* specimen into two fractions, a “float” fraction that would contain primarily silicates and carbonates and a “sink” fraction that would contain the dense minerals that would be chiefly pyrite due to the composition of the *Ynl* sample. Subsequent elemental analysis and MLA of the two HLS fractions should provide evidence to the likely mineral host for thallium.

The abbreviated results from elemental analysis are shown below in Table 4. Thallium, the element of key interest, was more concentrated in the HLS “sink” material where it was found at 81.6 ppm, with only 3.91 ppm in the “float” fraction. Other elements that were preferentially concentrated in the “sink” material were arsenic, bismuth, cadmium, copper, iron, lead, and antimony; all of which are considered chalcophiles according to the Goldschmidt classification, with the exception of iron, which is a siderophile.

The complete elemental analysis for *Ynl* HLS fractions is included in the appendix.

**Table 4. ICP-MS results for HLS fractions from the *Ynl*.**

<b>Element</b>	<b><i>Ynl</i> "Float"</b>	<b><i>Ynl</i> "Sink"</b>	<b>Units</b>	<b>MDL</b>

Zn	145	1162	ppm	0.2

The mineralogy of the HLS fractions was determined by MLA, and selected major and minor minerals are shown in Table 5. Pyrite was the most abundant phase in the “sink” fraction at 78% with only 2.3% in the “float” fraction. Other minerals that were preferentially partitioned in the “sink” fraction were iron oxide, barite, chalcocite, and galena, all minerals with specific gravities of 4.4 or greater.

**Table 5. MLA mineralogy of the HLS fractions and combined (wt. %) for *Ynl*.**

Mineral	Formula	<i>Ynl</i> “Float”	<i>Ynl</i> “Sink”	<i>Ynl</i> (Combined)
Quartz	SiO <sub>2</sub>	40.7	9.54	40.2
Mica	KAl <sub>2</sub> (AlSi <sub>3</sub> O <sub>10</sub> )(OH) <sub>2</sub>	23.3	0.54	23.0
Dolomite	CaMg(CO <sub>3</sub> ) <sub>2</sub>	21.0	0.64	20.7
K_Feldspar	KAlSi <sub>3</sub> O <sub>8</sub>	8.77	3.41	8.67
<b>Pyrite</b>	<b>FeS<sub>2</sub></b>	<b>2.27</b>	<b>78.3</b>	<b>3.57</b>
Biotite	K(Mg,Fe) <sub>3</sub> (AlSi <sub>3</sub> O <sub>10</sub> )(OH) <sub>2</sub>	2.01	0.17	1.98
Albite	NaAlSi <sub>3</sub> O <sub>8</sub>	0.94	0.00	0.92
Calcite	CaCO <sub>3</sub>	0.24	0.01	0.24
FeO	Fe <sub>2</sub> O <sub>3</sub>	0.12	1.90	0.15
Barite	BaSO <sub>4</sub>	0.09	2.55	0.13
Chalcocite	Cu <sub>2</sub> S	0.02	1.69	0.04
Galena	PbS	0.01	0.50	0.02
Bornite	Cu <sub>3</sub> FeS <sub>4</sub>	<0.01	0.28	<0.01

Since thallium was found at a higher concentration in the dense “sink” fraction than in the “float” fraction, it is likely that it occurs with one or more of the sulfide minerals that are enriched in this fraction, pyrite being the most likely due to its overwhelming content. However, this does not eliminate the possibility of it existing with chalcocite, bornite, or galena. Unfortunately, these findings do not help determine the source of soluble thallium, because over 30% of the *Ynl* is potassium silicates, and even at ultra trace levels these minerals could provide enough soluble thallium to cause elevated levels in humidity cell effluent.

## Upper Sulfide Zone (USZ)

A classified MLA false color image from the *USZ* specimen is shown in Figure 6. Pyrite (olive), quartz (lt purple), dolomite (green), and mica (lavender) were the primary phases in this specimen. A mica particle containing small amounts of pyrite and galena (lime) is highlighted in the MLA image.

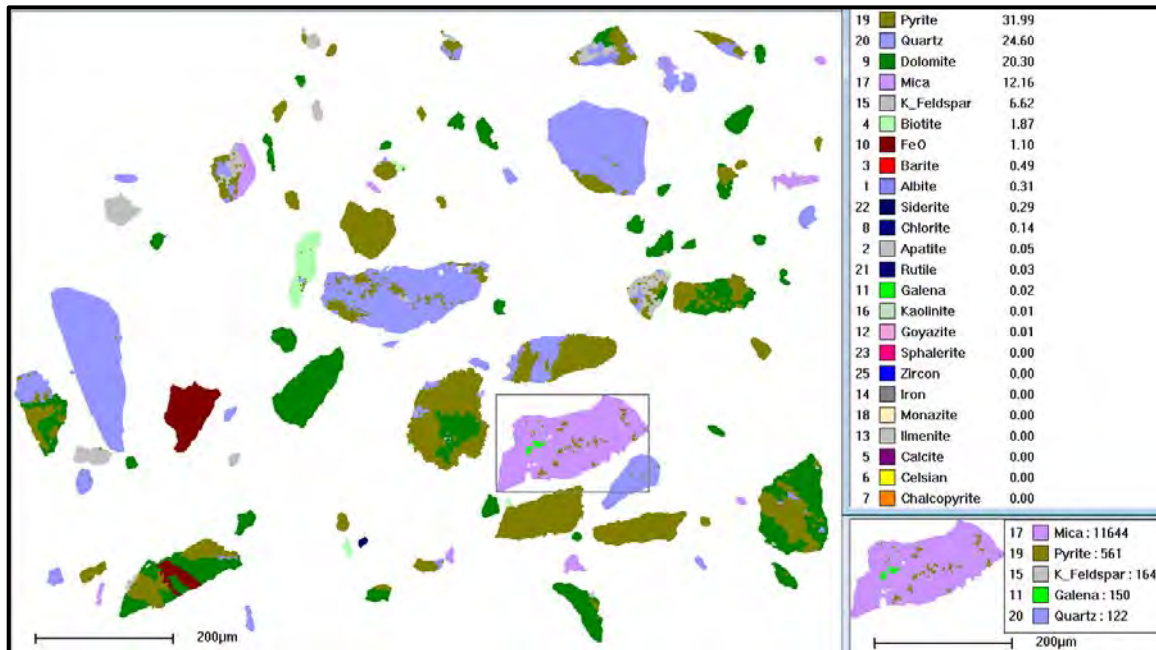

Figure 6. Classified MLA image from the *USZ* (-100 mesh). The particle inset shows the mineral surface area in pixels, concentration palette abundances in surface area percentage.

The BSE image in Figure 7 shows the mineral textures in the *USZ* specimen in greater detail than apparent in the false color image, and it is revealed that the pyrite (Py) occurs as framboids. The circled particle shows that the framboidal pyrite in mica also contained galena (PbS) inclusions. Particles of quartz (Qtz) and dolomite (Dol) had low gray levels and appear as shades of gray in the BSE image.

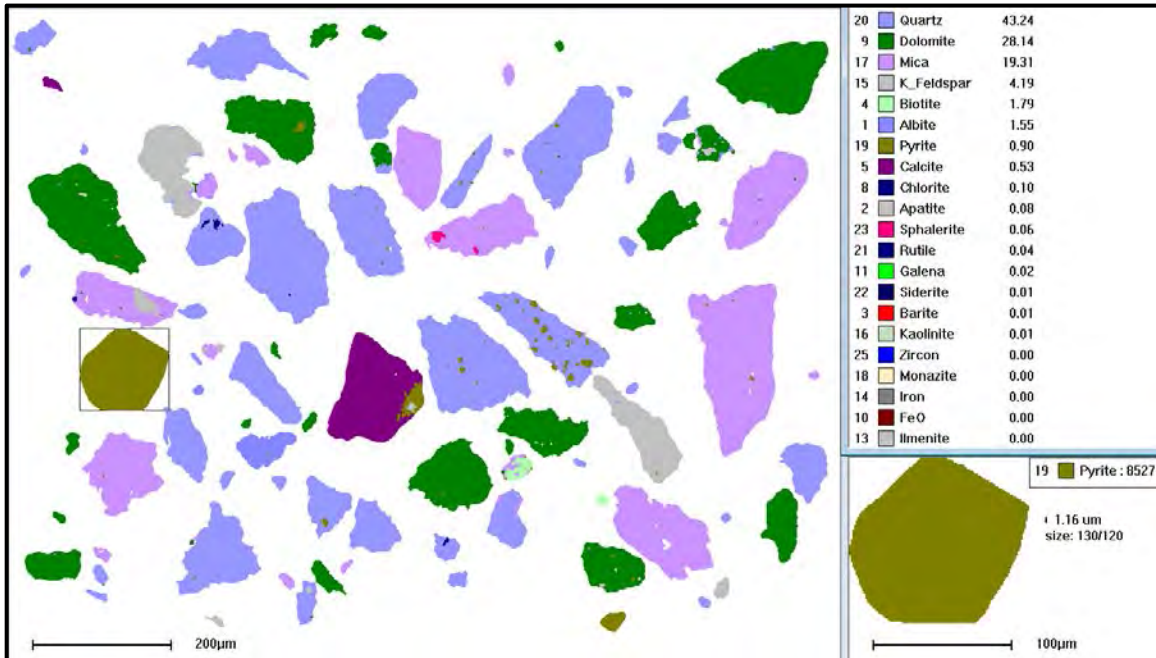

Figure 7. BSE image of the *USZ* sample (-100 mesh).

## ***Lower Newland Conglomerate and Shale (Ynl B)***

A large pyrite particle from the *Ynl B* specimen is highlighted in the false color image in Figure 8. Pyrite was nearly 1%, by surface area, of the minerals encountered in the specimen.

**Figure 8. Classified MLA image of *Ynl B* (-100 mesh). Particle inset shows phase area in pixels and the concentration palette displays concentration as surface area percentage.**

The pyrite particle from *Ynl B* (circled in Figure 9) appears to be massive, rather than framboidal; a contrast to the other samples examined in this study.

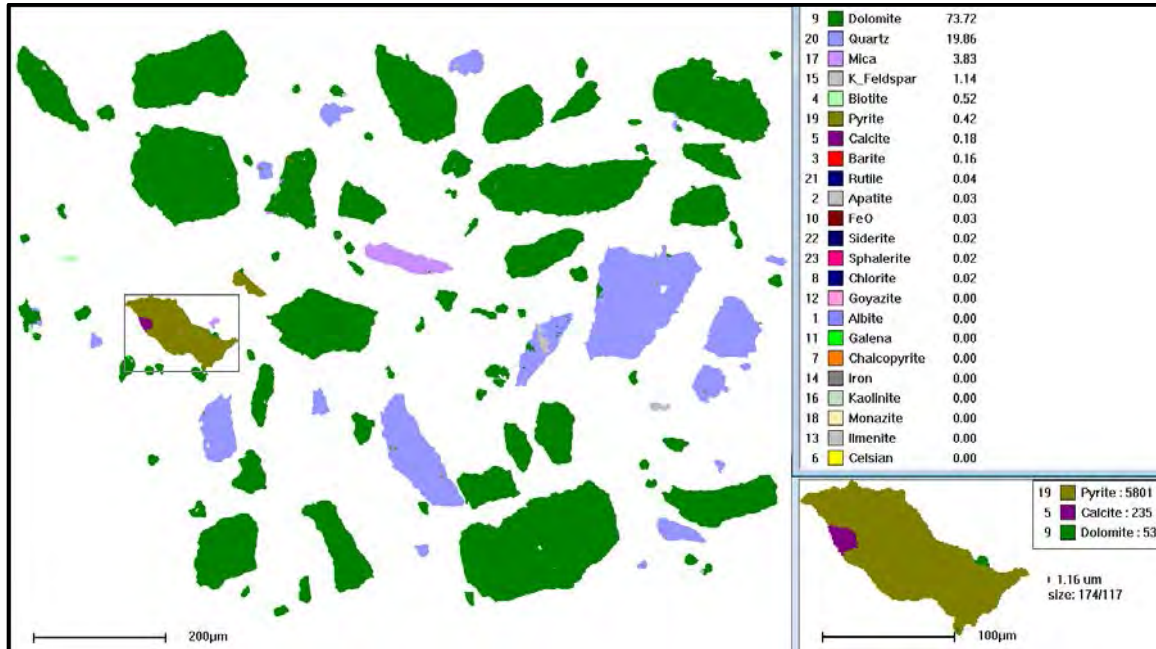

Figure 9. BSE image of *Ynl B* (-100 mesh).

## Dolomite “Nose” of Lower Newland Formation (Ynl 0)

A particle of pyrite from *Ynl 0* specimen is the focus in the Figure 10. Dolomite, shown in green, was the dominant gangue phase in the sample.

**Figure 10. Classified MLA image of *Ynl 0* (-100 mesh). Particle inset shows phase area in pixels and the concentration palette displays concentration as surface area percentage.**

The BSE image of the *Ynl 0* specimen is displayed in Figure 11. While the gray level and the mottled appearance of the gangue mineral phase in this image indicate presence of a single phase, the gangue was classified as dolomite (Dol) and quartz (Qtz). This is likely to due to intimate intermixing of the two as microcrystalline phases. The circled pyrite (Py) particle contains a small calcite inclusion that exhibits a lower gray level than the sulfide.

Figure 11. BSE image of *Ynl 0* (-100 mesh).

## CERTIFICATE OF ANALYSIS

VAN14001683.1

### CLIENT JOB INFORMATION

Project: Tintina  
Shipment ID:  
P.O. Number  
Number of Samples: 2

### SAMPLE DISPOSAL

DISP-PLP Dispose of Pulp After 90 days

### SAMPLE PREPARATION AND ANALYTICAL PROCEDURES

Procedure Code	Number of Samples	Code Description	Test Wgt (g)	Report Status	Lab
BAT01	1	Batch charge of <20 samples			VAN
SLBHP	2	Sort, label and box pulps			VAN
MA250	2	4 Acid digestion Ultratrace ICP-MS analysis	0.25	Completed	VAN
DRPLP	2	Warehouse handling / disposition of pulps			VAN

### ADDITIONAL COMMENTS

Acme does not accept responsibility for samples left at the laboratory after 90 days without prior written instructions for sample storage or return.

Invoice To: Montana Tech-CAMP  
1300 West Park Street

<sup>1</sup> Surface Water standards are the lowest available, which in most cases in the "chronic aquatic life" criteria. Hardness-dependent criteria have been adjusted for a site hardness of 130 mg/L.

<sup>2</sup> *Italicized* MDL (Method Detection Limit) values indicate that the limit used by the lab differs from the Required Reporting Limit (RRL). Discrepancies between MDLs and RRLs include: Cadmium (MDL=0.0003 mg/L, RLL=0.008 mg/L); Chromium (MDL=0.01 mg/L, RRL=0.002 mg/L); Mercury (MDL=0.00001 mg/L, RRL=0.000005 mg/L); Phosphorus (MDL=0.005 mg/L, RRL=0.001 mg/L); and Uranium (MDL=0.0002 mg/L, RRL=0.00002 mg/L).

GW= Ground water, SW= Surface water, MDL=Required Reporting Limit, **Red text** indicates "less than detection limit" values.

Pink highlighted cells indicate surface water quality exceedances and blue highlighted cells indicate ground water quality exceedances.

S- GRA06a	Sulfate Sulfur (HCl leachable)	WST- SEQ
ME- MS61	48 element four acid ICP- MS	
OA- VOL11	Static Net Acid Generation	
OA- VOL08m	Modified NP	

The results of this assay were based solely upon the content of the sample submitted. Any decision to invest should be made only after the potential investment value of the claim 'or deposit has been determined based on the results of assays of multiple samples of geological materials collected by the prospective investor or by a qualified person selected by him/her and based on an evaluation of all engineering data which is available concerning any proposed project. Statement required by Nevada State Law NRS 519

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

\*\*\*\*\* See Appendix Page for comments regarding this certificate \*\*\*\*\*

Comments: Due to the method limitation of OA- VOL11 (single addition NAG), decomposition of H2O2 may occur prior to the complete oxidation of all reactive sulphide, thus it may only account for the partial acid potential of sample with high S content.

WETLab Diffusion Test Results

9/30/2015

Tintina Resources  
17 East Main Street  
White Sulphur Springs, MT 59645  
Attn: Bob Jacko/Katie Seipel/Lisa Kirk

OrderID: 1509377

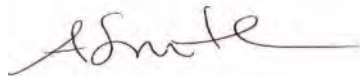

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/14/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509377

---

### Specific Report Comments

The cation/anion balance for sample 1509377-002 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 29, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091780  
Project Name: Job ID 1509377

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 9/21/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091780-001	C773-15 B,C Pull #1	09/14/15 17:00	09/21/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15091780-002	C773-15 B,C Pull #2	09/14/15 20:00	09/21/15	Waste Water	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509377  
**Lab ID:** B15091780-001  
**Client Sample ID:** C773-15 B,C Pull #1

**Report Date:** 09/29/15  
**Collection Date:** 09/14/15 17:00  
**Date Received:** 09/21/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.142	mg/L		0.009		E200.7	09/22/15 15:36 / mas

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/15/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509387

---

### Specific Report Comments

The cation/anion balance for samples 1509387-001 and 002 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 29, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091782  
Project Name: Job ID 1509387

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 9/21/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091782-001	C773-15 B,C Pull #3	09/15/15 8:00	09/21/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15091782-002	C773-15 B,C Pull #4	09/15/15 15:00	09/21/15	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509387  
**Lab ID:** B15091782-001  
**Client Sample ID:** C773-15 B,C Pull #3

**Report Date:** 09/29/15  
**Collection Date:** 09/15/15 08:00  
**Date Received:** 09/21/15  
**Matrix:** Aqueous

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.394	mg/L		0.009		E200.7	09/22/15 15:57 / mas

Phosphorus	0.013	mg/L	L	0.007		E200.7	09/22/15 15:57 / mas
Selenium	ND	mg/L		0.001		E200.8	09/22/15 20:52 / mas
Silicon	0.29	mg/L		0.05		E200.7	09/22/15 15:57 / mas
Silver	ND	mg/L		0.0002		E200.8	09/25/15 16:40 / mas
Thallium	0.0096	mg/L		0.0002		E200.8	09/22/15 20:52 / mas
Uranium	ND	mg/L		0.0002		E200.8	09/22/15 20:52 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/16/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509423

---

### Specific Report Comments

The cation/anion balance for sample 1509423-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 05, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092152                      Quote ID: B3679  
Project Name: 1509423

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/24/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092152-001	C773-15 B,C Pull #5	09/16/15 15:00	09/24/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** 1509423  
**Lab ID:** B15092152-001  
**Client Sample ID:** C773-15 B,C Pull #5

**Report Date:** 10/05/15  
**Collection Date:** 09/16/15 15:00  
**Date Received:** 09/24/15  
**Matrix:** Waste Water

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/17/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509469

---

### Specific Report Comments

The cation/anion balance for sample 1509469-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 01, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092153                      Quote ID: B3679

Project Name: Job ID 1509469

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/24/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092153-001	C773-15 B,C Pull #6	09/17/15 15:00	09/24/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509469  
**Lab ID:** B15092153-001  
**Client Sample ID:** C773-15 B,C Pull #6

**Report Date:** 10/01/15  
**Collection Date:** 09/17/15 15:00  
**Date Received:** 09/24/15  
**Matrix:** Waste Water

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

- Chain of custody present? Yes  No
- Chain of custody signed when relinquished and received? Yes  No
- Chain of custody agrees with sample labels? Yes  No
- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 5.7°C On Ice
- Water - VOA vials have zero headspace? Yes  No  No VOA vials submitted
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/18/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509519

---

### Specific Report Comments

The cation/anion balance for sample 1509519-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 01, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092154                      Quote ID: B3679

Project Name: Job ID 1509519

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/24/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092154-001	C773-15 B,C Pull #7	09/18/15 15:00	09/24/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509519  
**Lab ID:** B15092154-001  
**Client Sample ID:** C773-15 B,C Pull #7

**Report Date:** 10/01/15  
**Collection Date:** 09/18/15 15:00  
**Date Received:** 09/24/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

Phosphorus	ND	mg/L	L	0.007		E200.7	09/25/15 20:38 / r/h
Selenium	ND	mg/L		0.001		E200.8	09/26/15 06:14 / mas
Silicon	0.47	mg/L		0.05		E200.7	09/25/15 20:38 / r/h
Silver	ND	mg/L		0.0002		E200.8	09/29/15 20:40 / amm
Thallium	0.0065	mg/L		0.0002		E200.8	09/26/15 06:14 / mas
Uranium	ND	mg/L		0.0002		E200.8	09/29/15 20:40 / amm

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Attn: Bob Jacko/Katie Seipel/Lisa Kirk

OrderID: 1509546

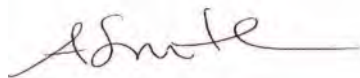

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/19/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509546

---

### Specific Report Comments

The cation/anion balance for sample 1509546-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 01, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092157                      Quote ID: B3679

Project Name: Job ID 1509546

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/24/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092157-001	C773-15 B,C Pull #8	09/19/15 15:00	09/24/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509546  
**Lab ID:** B15092157-001  
**Client Sample ID:** C773-15 B,C Pull #8

**Report Date:** 10/01/15  
**Collection Date:** 09/19/15 15:00  
**Date Received:** 09/24/15  
**Matrix:** Waste Water

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/20/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509547

---

### Specific Report Comments

The cation/anion balance for sample 1509547-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 01, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092155                      Quote ID: B3679

Project Name: Job ID 1509547

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/24/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092155-001	C773-15 B,C Pull #9	09/20/15 15:00	09/24/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509547  
**Lab ID:** B15092155-001  
**Client Sample ID:** C773-15 B,C Pull #9

**Report Date:** 10/01/15  
**Collection Date:** 09/20/15 15:00  
**Date Received:** 09/24/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/21/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509555

---

### Specific Report Comments

The cation/anion balance for sample 1509555-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 06, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092579                      Quote ID: B3679

Project Name: Job ID: 1509555

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/29/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092579-001	C773-15 B,C Pull #10	09/21/15 15:00	09/29/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509555  
**Lab ID:** B15092579-001  
**Client Sample ID:** C773-15 B,C Pull #10

**Report Date:** 10/06/15  
**Collection Date:** 09/21/15 15:00  
**Date Received:** 09/29/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

Per phone call with Mitchell at Western Environmental Testing Laboratory analyze samples per client history.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/22/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

*Tintina Resources - 1509580*

---

### **Specific Report Comments**

The cation/anion balance for sample 1509580-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### **Subcontracting Comments**

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### **Report Legend**

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### **General Lab Comments**

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 06, 2015

Western Environmental Testing Laboratory

475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092578                      Quote ID: B3679

Project Name: Job ID: 1509580

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/29/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092578-001	C773-15 B,C Pull #11	09/22/15 15:00	09/29/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509580  
**Lab ID:** B15092578-001  
**Client Sample ID:** C773-15 B,C Pull #11

**Report Date:** 10/06/15  
**Collection Date:** 09/22/15 15:00  
**Date Received:** 09/29/15  
**Matrix:** Waste Water

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

Per phone call with Mitchell at Western Environmental Testing Laboratory analyze samples per client history.

Attn: Bob Jacko/Katie Seipel/Lisa Kirk

OrderID: 1509634

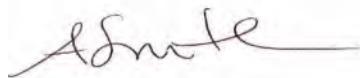

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/23/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

# Western Environmental Testing Laboratory

## Report Comments

---

Tintina Resources - 1509634

---

### Specific Report Comments

The cation/anion balance for sample 1509634-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 06, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092575                      Quote ID: B3679

Project Name: Job ID : 1509634

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/29/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092575-001	C773-15 B,C Pull #12	09/23/15 15:00	09/29/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID : 1509634  
**Lab ID:** B15092575-001  
**Client Sample ID:** C773-15 B,C Pull #12

**Report Date:** 10/06/15  
**Collection Date:** 09/23/15 15:00  
**DateReceived:** 09/29/15  
**Matrix:** Waste Water

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

Per phone call with Mitchell at Western Environmental Testing Laboratory analyze samples per client history.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/24/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509666

---

### Specific Report Comments

The cation/anion balance for sample 1509666-001 was outside WETLAB acceptance criteria. Reanalysis on numerous other samples in this project have confirmed the original results for those samples therefore this sample has not been reanalyzed.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 09, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15100206                      Quote ID: B3679

Project Name: Job ID: 1509666

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 10/2/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15100206-001	C773-15 B,C Pull #13	09/24/15 15:00	10/02/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509666  
**Lab ID:** B15100206-001  
**Client Sample ID:** C773-15 B,C Pull #13

**Report Date:** 10/09/15  
**Collection Date:** 09/24/15 15:00  
**Date Received:** 10/02/15  
**Matrix:** Waste Water

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/25/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509735

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 13, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15100211                      Quote ID: B3679

Project Name: Job ID: 1509735

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 10/2/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15100211-001	C773-15 B,C Pull #14	09/25/15 15:00	10/02/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509735  
**Lab ID:** B15100211-001  
**Client Sample ID:** C773-15 B,C Pull #14

**Report Date:** 10/13/15  
**Collection Date:** 09/25/15 15:00  
**Date Received:** 10/02/15  
**Matrix:** Waste Water

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/24/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508605

---

### General Comments

None

### Specific Comments

The cation/anion balance for sample 1508605-002 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

# ANALYTICAL SUMMARY REPORT

September 28, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091694  
Project Name: Job ID 1508605

Energy Laboratories Inc Billings MT received the following 3 samples for Western Environmental Testing Laboratory on 9/18/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091694-001	C586-15 P, Q Pull #1-	08/24/15 17:00	09/18/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15091694-002	C586-15 P, Q Pull #2-	08/24/15 20:00	09/18/15	Waste Water	Same As Above
B15091694-003	C586-15 P, Q Pull #3-	08/25/15 8:00	09/18/15	Waste Water	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508605  
**Work Order:** B15091694

**Report Date:** 09/28/15

## CASE NARRATIVE

---

Prep Comments for Sample B15091694-001A, Test VOC-5035: The prep hold time was exceeded by 13.7 days.  
Prep Comments for Sample B15091694-001A, Test PRP-HG-245.1-LL: The prep hold time was exceeded by 0.724 days.  
Prep Comments for Sample B15091694-002A, Test PRP-HG-245.1-LL: The prep hold time was exceeded by 0.599 days.  
Prep Comments for Sample B15091694-003A, Test PRP-HG-245.1-LL: The prep hold time was exceeded by 0.0995 days.

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508605  
**Lab ID:** B15091694-001  
**Client Sample ID:** C586-15 P, Q Pull #1-

**Report Date:** 09/28/15  
**Collection Date:** 08/24/15 17:00  
**Date Received:** 09/18/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.058	mg/L		0.009		E200.8	09/22/15 03:56 / amm

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Did not receive an attachment with highlighted metals. Gina McCartney, Energy Laboratories Project Manager, contacted Holly who indicated to use the same metals list as per history.

*Amended*

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

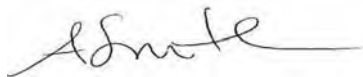

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/25/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes the corrected Sample ID for 1508606-001.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources/Tintina Montana - 1508606 Amended

---

### Specific Report Comments

The cation/anion balance for sample 1508606-001 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the accepted holding time
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits
- SC -- Spike recovery not calculated. Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Per federal regulation the holding time for the following parameters in aqueous/water samples is 15 minutes: Residual Chlorine, pH, Dissolved Oxygen, Sulfite.

# ANALYTICAL SUMMARY REPORT

April 28, 2017

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091693  
Project Name: Job ID 1508606

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/18/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091693-001	C586-15 O,Q Pull #4	08/25/15 15:00	09/18/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508606  
**Work Order:** B15091693

**Revised Date:** 04/28/17

**Report Date:** 09/28/15

## CASE NARRATIVE

---

Revised 4/28/2017:

Per request from the client on 4/27/2017, change the sample ID on B15091693-001 from C601-15 O,Q Pull #4 to C586-15 O,Q Pull #4.

The report has been revised and replaces any previously issued report in its entirety.

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508606  
**Lab ID:** B15091693-001  
**Client Sample ID:** C586-15 O,Q Pull #4

**Revised Date:** 04/28/17  
**Report Date:** 09/28/15  
**Collection Date:** 08/25/15 15:00  
**DateReceived:** 09/18/15  
**Matrix:** Waste Water

Uranium	ND	mg/L		0.0002		E200.8	09/22/15 03:51 / amm

**Report Definitions:**

RL - Analyte reporting limit.	MCL - Maximum contaminant level.
QCL - Quality control limit.	ND - Not detected at the reporting limit.
H - Analysis performed past recommended holding time.	L - Lowest available reporting limit for the analytical method used.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Did not receive an attachment with highlighted metals. Gina McCartney, Energy Laboratories Project Manager, contacted Holly who indicated to use the same highlight metals list as per history.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/26/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

---

Tintina Resources - 1508644

### General Comments

None

### Specific Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

# ANALYTICAL SUMMARY REPORT

September 28, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091691

Project Name: Job ID 1508644

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/18/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091691-001	C586-15 P, Q Pull #5	08/26/15 15:00	09/18/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508644  
**Lab ID:** B15091691-001  
**Client Sample ID:** C586-15 P, Q Pull #5

**Report Date:** 09/28/15  
**Collection Date:** 08/26/15 15:00  
**Date Received:** 09/18/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.603	mg/L		0.009		E200.8	09/22/15 03:37 / amm

Cadmium	ND	mg/L		0.00003		E200.8	09/22/15 20:11 / mas
Lead	ND	mg/L		0.0002		E200.8	09/22/15 03:37 / amm
Mercury	0.0000145	mg/L		5E-06		E245.1	09/23/15 14:06 / ser
Phosphorus	0.017	mg/L	L	0.007		E200.7	09/21/15 22:37 / rlh
Selenium	ND	mg/L		0.001		E200.8	09/22/15 03:37 / amm
Silicon	0.47	mg/L		0.05		E200.7	09/21/15 22:37 / rlh
Silver	ND	mg/L		0.0002		E200.8	09/22/15 03:37 / amm
Thallium	0.0008	mg/L		0.0002		E200.8	09/22/15 03:37 / amm
Uranium	ND	mg/L		0.0002		E200.8	09/22/15 20:11 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

## QA/QC Summary Report

(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 12.0°C On Ice
- Water - VOA vials have zero headspace? Yes  No  No VOA vials submitted
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Did not receive an attachment with highlighted metals. Gina McCartney, Energy Laboratories Project Manager, contacted Holly who indicated to use the same highlight metals list as per history.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/27/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508697

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 14, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090447  
Project Name: Job ID 1508697

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/3/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090447-001	C586-15 P,Q Pull #6	08/27/15 15:00	09/03/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508697  
**Lab ID:** B15090447-001  
**Client Sample ID:** C586-15 P,Q Pull #6

**Report Date:** 09/14/15  
**Collection Date:** 08/27/15 15:00  
**Date Received:** 09/03/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.415	mg/L		0.009		E200.8	09/04/15 19:06 / mas
Antimony	0.0014	mg/L		0.0005		E200.8	09/04/15 19:06 / mas
Arsenic	0.024	mg/L		0.001		E200.8	09/04/15 19:06 / mas

Uranium	ND	mg/L		0.0002		E200.8	09/04/15 19:06 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/28/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508751

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 14, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090456  
Project Name: Job ID 1508751

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/3/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090456-001	C586-15 P,Q Pull #7	08/28/15 15:00	09/03/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508751  
**Lab ID:** B15090456-001  
**Client Sample ID:** C586-15 P,Q Pull #7

**Report Date:** 09/14/15  
**Collection Date:** 08/28/15 15:00  
**Date Received:** 09/03/15  
**Matrix:** Waste Water

Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/29/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508754

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 14, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090454

Project Name: Job ID 1508754

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/3/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090454-001	C586-15 P,Q Pull #8	08/29/15 15:00	09/03/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508754  
**Lab ID:** B15090454-001  
**Client Sample ID:** C586-15 P,Q Pull #8

**Report Date:** 09/14/15  
**Collection Date:** 08/29/15 15:00  
**Date Received:** 09/03/15  
**Matrix:** Waste Water

Uranium	ND	mg/L		0.0002		E200.8	09/04/15 19:16 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

The sample label does not indicate if the sample has been filtered. Per phone call with Mitchell at Western Environmental Testing Laboratory this sample is filtered.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/30/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508755

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 14, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090451

Project Name: Job ID 1508755

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/3/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090451-001	C586-15 P,Q Pull #9	08/30/15 15:00	09/03/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508755  
**Lab ID:** B15090451-001  
**Client Sample ID:** C586-15 P,Q Pull #9

**Report Date:** 09/14/15  
**Collection Date:** 08/30/15 15:00  
**Date Received:** 09/03/15  
**Matrix:** Waste Water

**Qualifiers:**

RL - Analyte reporting limit.

A - The analyte level was greater than four times the spike level. In accordance with the method % recovery is not calculated.

ND - Not detected at the reporting limit.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/31/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508757

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 14, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090455

Project Name: Job ID 1508757

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/3/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090455-001	C586-15 P,Q Pull #10	08/31/15 15:00	09/03/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508757  
**Lab ID:** B15090455-001  
**Client Sample ID:** C586-15 P,Q Pull #10

**Report Date:** 09/14/15  
**Collection Date:** 08/31/15 15:00  
**Date Received:** 09/03/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.269	mg/L		0.009		E200.8	09/04/15 19:20 / mas

Thallium	0.0003	mg/L		0.0002		E200.8	09/04/15 19:20 / mas
Uranium	ND	mg/L		0.0002		E200.8	09/04/15 19:20 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/1/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509002

---

### Specific Report Comments

The cation/anion balance for sample 1509002-001 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 18, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090781

Project Name: Job ID 1509002

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/9/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090781-001	C586-15 P,Q Pull #11	09/01/15 15:00	09/09/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509002  
**Lab ID:** B15090781-001  
**Client Sample ID:** C586-15 P,Q Pull #11

**Report Date:** 09/18/15  
**Collection Date:** 09/01/15 15:00  
**Date Received:** 09/09/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/2/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509044

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 18, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090770  
Project Name: Job ID 1509044

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/9/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090770-001	C586-15 P,Q Pull# 12	09/02/15 15:00	09/09/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509044  
**Lab ID:** B15090770-001  
**Client Sample ID:** C586-15 P,Q Pull# 12

**Report Date:** 09/18/15  
**Collection Date:** 09/02/15 15:00  
**Date Received:** 09/09/15  
**Matrix:** Waste Water

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/3/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509078

---

### Specific Report Comments

The cation/anion balance for sample 1509078-001 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 18, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090779  
Project Name: Job ID 1509078

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/9/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090779-001	C586-15 P,Q Pull# 13	09/03/15 15:00	09/09/15	Waste Water	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509078  
**Lab ID:** B15090779-001  
**Client Sample ID:** C586-15 P,Q Pull# 13

**Report Date:** 09/18/15  
**Collection Date:** 09/03/15 15:00  
**Date Received:** 09/09/15  
**Matrix:** Waste Water

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/4/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney  
QA Specialist

## Report Comments

---

Tintina Resources - 1509122

---

### Specific Report Comments

The cation/anion balance for sample 1509122-001 was outside WETLAB acceptance criteria. This sample has historically failed the balance parameter.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 22, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091184

Project Name: Job ID 1509122

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/14/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091184-001	C589-15 P,Q Pull #14 -	09/04/15 15:00	09/14/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509122  
**Lab ID:** B15091184-001  
**Client Sample ID:** C589-15 P,Q Pull #14 -

**Report Date:** 09/22/15  
**Collection Date:** 09/04/15 15:00  
**Date Received:** 09/14/15  
**Matrix:** Aqueous

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

OrderID: 1508607  
***Amended***

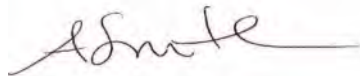

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 8/25/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508607 Amended

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

December 02, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091692  
Project Name: Job ID 1508607

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 9/18/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091692-001	C586-15 O,Q WK: 0	08/25/15 9:00	09/18/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15091692-002	C601-15 P,Q WK: 0	08/25/15 9:00	09/18/15	Leachate	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508607  
**Work Order:** B15091692

**Revised Date:** 12/02/15

**Report Date:** 09/28/15

## CASE NARRATIVE

---

Revised 11/24/2015:

Per Hollie Timmons sample ID's are incorrect on the original report. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

Revised 12/2/2015:

Per Hollie Timmons change sample ID for sample C586-15 O,Q WK: 0- WLHCT-0119 (B15091692-001) to C586-15 O, Q WK: 0, and sample C601-15 P, W WK:0- WLHCT-0118 (B15091692-002) to C601-15 P,Q WK: 0. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

Arsenic	0.002	mg/L		0.001		E200.8	09/22/15 03:41 / amm
Cadmium	0.00027	mg/L		0.00003		E200.8	09/22/15 03:41 / amm
Lead	ND	mg/L		0.0002		E200.8	09/22/15 03:41 / amm
Mercury	0.0000337	mg/L	H	5E-06		E245.1	09/23/15 14:13 / ser
Phosphorus	ND	mg/L	L	0.007		E200.7	09/21/15 22:41 / rlh
Selenium	ND	mg/L		0.001		E200.8	09/22/15 03:41 / amm
Silicon	0.10	mg/L		0.05		E200.7	09/21/15 22:41 / rlh
Silver	ND	mg/L		0.0002		E200.8	09/22/15 03:41 / amm
Thallium	0.0006	mg/L		0.0002		E200.8	09/22/15 03:41 / amm
Uranium	ND	mg/L		0.0002		E200.8	09/22/15 20:31 / mas

**Report Definitions:**

RL - Analyte reporting limit.	MCL - Maximum contaminant level.
QCL - Quality control limit.	ND - Not detected at the reporting limit.
H - Analysis performed past recommended holding time.	L - Lowest available reporting limit for the analytical method used.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Did not receive an attachment with highlighted metals. Gina McCartney, Energy Laboratories Project Manager, contacted Holly who indicated to use the same highlight metals list as per history.

**Amended**

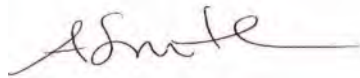

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/1/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1508764 Amended

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

December 02, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15090780  
Project Name: Job ID 1508764

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 9/9/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15090780-001	C586-15 O,Q WK: 1	09/01/15 9:00	09/09/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15090780-002	C601-15 P,Q WK: 1	09/01/15 9:00	09/09/15	Leachate	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** Job ID 1508764  
**Work Order:** B15090780

**Revised Date:** 12/02/15

**Report Date:** 09/18/15

## CASE NARRATIVE

---

Revised 11/24/2015:

Per Hollie Timmons sample ID's are incorrect on the original report. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

Revised 12/2/2015:

Per Hollie Timmons change sample ID for sample C586-15 O, Q WK: 1- WLHCT-0119 (B15090780-001) to C586-15 O,Q WK: 1, and sample C601-15 P, Q 1-WLHCT-0118 (B15090780-002) to C601-15 P,Q WK: 1. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

*Amended*

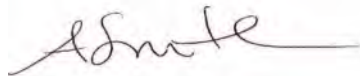

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/8/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509164 Amended

---

### Specific Report Comments

The cation/anion balance for samples 1509164-001 and 002 were outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

November 24, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091185

Project Name: 1509164

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 9/14/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091185-001	C586-15 0, Q WK:2	09/08/15 9:00	09/14/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15091185-002	C601 P, Q WK:2	09/08/15 9:00	09/14/15	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** 1509164  
**Work Order:** B15091185

**Revised Date:** 11/24/15

**Report Date:** 09/22/15

## **CASE NARRATIVE**

---

Revised 11/24/2015:

Per Hollie Timmons sample ID's are incorrect on the original report. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

*Amended*

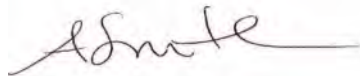

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/15/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

*Tintina Resources - 1509366 Amended*

### Specific Report Comments

The result for the laboratory control sample (LCS) for the analysis of pH on samples 1509366-001 and 002 was outside WETLAB acceptance criteria. Due to a lack of sample volume the analysis could not be performed a second time. The reported data should be considered an estimate. We apologize for any inconvenience this may have caused.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

WETLAB'S Standard Terms and Conditions apply unless written terms specify otherwise. Payment terms are Net 30 for established customers. Pre-payment is required for clients without an account.

Client/Collector attests to the validity and authenticity of the sample(s) and is (are) aware that tampering with or intentionally mislabeling the sample(s) location or date/time of collection will be considered fraud and may be subject to legal action (NAC-453.216)

Samples are discarded 90 days after receipt unless other arrangements have been made with the laboratory

To the maximum extent permitted by law, the Client agrees to limit the liability of WETLAB for the Client's damages to the total compensation received, unless other arrangements are made in writing. This limitation shall apply regardless of the cause of action or legal theory applied or asserted.

***Amended***

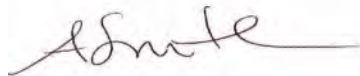

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/22/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509578 Amended

---

### Specific Report Comments

The cation/anion balance for sample 1509578-001 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

December 02, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092483                      Quote ID: B3679

Project Name: Job ID 1509578

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 9/29/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092483-001	C586-15 O,Q WK:4	09/22/15 9:00	09/29/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15092483-002	C601-15 P,Q WK:4	09/22/15 9:00	09/29/15	Leachate	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** Job ID 1509578  
**Work Order:** B15092483

**Revised Date:** 12/02/15

**Report Date:** 10/07/15

## CASE NARRATIVE

---

Revised 11/24/2015:

Per Hollie Timmons sample ID's are incorrect on the original report. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

Revised 12/2/2015:

Per Hollie Timmons change sample ID for sample C586-15 O, Q WK: 4- WLHCT-0119 (B15092483-001) to C586-15 O,Q WK:4, and sample C601-15 P, Q WK: 4- WLHCT-0118 (B15092483-002) to C601-15 P,Q WK:4. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Per phone call with Mitchell at Western Environmental Testing Laboratory analyze samples per client history.

***Amended***

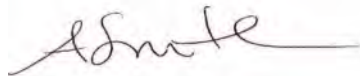

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/29/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509798 Amended

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/6/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

# Western Environmental Testing Laboratory

## Report Comments

Tintina Resources - 1510100 Amended

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Report Comments

Tintina Resources - 1510305 Amended

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/20/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1510523

---

### Specific Report Comments

Sample 1510523-002 had unexpectedly high metals results as well as an unacceptable cation/anion balance percent error. It was determined that the sample included dirt/particulate matter. It is thought that these particulates had a high metals concentration which upset the expected cation/anion balance.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

December 02, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15102008                      Quote ID: B3679

Project Name: Job ID: 1510523

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 10/26/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15102008-001	C586-15 O, Q Wk: 8	10/20/15 9:00	10/26/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15102008-002	C601-15 P, Q Wk: 8	10/20/15 9:00	10/26/15	Leachate	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1510523  
**Work Order:** B15102008

**Revised Date:** 12/02/15

**Report Date:** 11/04/15

## CASE NARRATIVE

---

Revised 12/2/2015:

Per Hollie Timmons change sample ID for sample C601-15 O, Q Wk: 8- WLHCT-0118 (B150102008-001) to C586-15 O, Q Wk: 8, and sample C586-15 P, Q Wk: 8- WLHCT-0119 (B15102008-002) to C601-15 P, Q Wk: 8. The sample ID's have been corrected. We apologize for any inconvenience this may have caused.

The report has been revised and replaces any previously issued report in its entirety.

Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

*Amended*

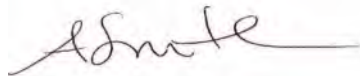

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/27/2015. Additional comments are located on page 2 of this report.

This is an amended report that includes corrected sample IDs. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1510681 Amended

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/3/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

---

Tintina Resources - 1511010

---

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/10/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

---

Tintina Resources - 1511202

---

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

December 07, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15112009                      Quote ID: B3679

Project Name: Job ID: 1511386

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 11/30/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15112009-001	C586-15 P,Q WK: 12 - WLHCT-0118	11/17/15 9:00	11/30/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15112009-002	C601-15 O,Q WK: 12 - WLHCT-0119	11/17/15 9:00	11/30/15	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1511386  
**Lab ID:** B15112009-001  
**Client Sample ID:** C586-15 P,Q WK: 12 - WLHCT-0118

**Report Date:** 12/07/15  
**Collection Date:** 11/17/15 09:00  
**Date Received:** 11/30/15  
**Matrix:** Aqueous

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	10.8	mg/L	D	0.01		E200.7	12/01/15 14:59 / jjw
Antimony	ND	mg/L		0.0005		E200.8	12/01/15 21:49 / mas
Arsenic	0.002	mg/L		0.001		E200.8	12/01/15 21:49 / mas
Cadmium	0.00097	mg/L		0.00003		E200.8	12/01/15 21:49 / mas
Lead	0.0024	mg/L		0.0003		E200.8	12/01/15 21:49 / mas
Mercury	ND	mg/L		5E-06		E245.1	11/30/15 16:03 / ser
Phosphorus	0.090	mg/L	L	0.007		E200.7	12/03/15 11:50 / jjw
Selenium	ND	mg/L		0.001		E200.8	12/01/15 21:49 / mas
Silicon	1.15	mg/L		0.05		E200.7	12/01/15 14:59 / jjw
Silver	ND	mg/L		0.0002		E200.8	12/01/15 21:49 / mas
Thallium	0.0097	mg/L		0.0002		E200.8	12/01/15 21:49 / mas
Uranium	0.0050	mg/L		0.0002		E200.8	12/01/15 21:49 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

- Samples in proper container/bottle? Yes  No
- Sample containers intact? Yes  No
- Sufficient sample volume for indicated test? Yes  No
- All samples received within holding time?  
(Exclude analyses that are considered field parameters such as pH, DO, Res Cl, Sulfite, Ferrous Iron, etc.) Yes  No
- Temp Blank received in all shipping container(s)/cooler(s)? Yes  No  Not Applicable
- Container/Temp Blank temperature: 11.4°C No Ice
- Water - VOA vials have zero headspace? Yes  No  Not Applicable
- Water - pH acceptable upon receipt? Yes  No  Not Applicable

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/24/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1511609

---

### Specific Report Comments

The result for Ferrous Iron for sample 1511609-001 is slightly higher than Total Iron. This indicates that all of the Iron is in the form of Ferrous Iron. Since the results were close in value reanalysis was not done.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Report Comments

---

Tintina Resources - 1511699

---

### Specific Report Comments

The result for the continuing calibration verification (CCV) sample during the analysis for pH was outside WETLAB acceptance criteria. Laboratory Control Samples (LCS/LFB) and Duplicate data was however acceptable. The reported data for pH on all samples should be considered estimates. Due to a lack of sample volume reanalysis was not possible. We apologize for any inconvenience this may have caused.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/8/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1512203

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/15/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1512448

---

### Specific Report Comments

The cation/anion balance for sample 1512448-002 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

December 24, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15121495                      Quote ID: B3679  
Project Name: 1512448

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 12/18/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15121495-001	C586-15 P,Q WK:16	12/15/15 9:00	12/18/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B15121495-002	C601-15 O,Q WK:16	12/15/15 9:00	12/18/15	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** 1512448  
**Lab ID:** B15121495-001  
**Client Sample ID:** C586-15 P,Q WK:16

**Report Date:** 12/24/15  
**Collection Date:** 12/15/15 09:00  
**Date Received:** 12/18/15  
**Matrix:** Aqueous

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/22/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1512661

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/29/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1512764

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/5/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1601011

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Report Comments

---

Tintina Resources - 1601182

---

### Specific Report Comments

The cation/anion balance for sample 1601182-002 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

January 26, 2016

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B16011070                      Quote ID: B3679  
Project Name: 1601182

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 1/18/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16011070-001	C586-15 P,Q WK: 20-WLHCT-0118	01/12/16 9:00	01/18/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B16011070-002	C601-15 O,Q WK: 20-WLHCT-0119	01/12/16 9:00	01/18/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** 1601182  
**Lab ID:** B16011070-001  
**Client Sample ID:** C586-15 P,Q WK: 20-WLHCT-0118

**Report Date:** 01/26/16  
**Collection Date:** 01/12/16 09:00  
**Date Received:** 01/18/16  
**Matrix:** Aqueous

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	32.6	mg/L	D	0.01		E200.7	01/20/16 11:37 / jjw
Antimony	0.0008	mg/L		0.0005		E200.8	01/19/16 16:54 / mas
Arsenic	0.305	mg/L		0.001		E200.8	01/19/16 16:54 / mas
Cadmium	0.00172	mg/L		0.00003		E200.8	01/19/16 16:54 / mas
Lead	0.0039	mg/L		0.0003		E200.8	01/19/16 16:54 / mas
Mercury	ND	mg/L		5E-06		E245.1	01/19/16 16:34 / ser
Phosphorus	0.07	mg/L	D	0.02		E200.7	01/20/16 11:37 / jjw

RL - Analyte reporting limit.

A - The analyte level was greater than four times the spike level. In accordance with the method % recovery is not calculated.

ND - Not detected at the reporting limit.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

## Contact and Corrective Action Comments:

Samples received partially frozen.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/19/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1601362

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/2/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

---

Tintina Resources - 1602026

---

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/9/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1602206

---

### Specific Report Comments

The cation/anion balance for sample 1602206-002 was outside WETLAB acceptance criteria; however, reanalysis confirmed the original results.

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

February 25, 2016

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B16021189                      Quote ID: B3679  
Project Name: 1602206

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 2/16/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16021189-001	1602206-001, C586-15 P Q WK:24 - WLHCT-0118	02/09/16 9:00	02/16/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B16021189-002	1602206-002, C601-15 O Q WK:24 - WLHCT-0119	02/09/16 9:00	02/16/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

**CLIENT:** Western Environmental Testing Laboratory  
**Project:** 1602206  
**Work Order:** B16021189

**Revised Date:** 02/25/16

**Report Date:** 02/18/16

## CASE NARRATIVE

---

Revised 2/25/2016:

Per Hollie Timmons on 2/24/16, add Mercury to sample 1602206-001, C586-15 P Q WK:24 - WLHCT-0118 (B16021189-001) and 1602206-002, C601-15 O Q WK:24 - WLHCT-0119 (B16021189-002).

The report has been revised and replaces any previously issued report in its entirety.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

---

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/16/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1602357

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

*Amended*

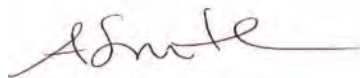

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/23/2016. Additional comments are located on page 2 of this report.

This is an amended report that includes the corrected result for Electrical Conductivity for sample 1602531-002. If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

Tintina Resources - 1602531 Amended

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 3/1/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney  
QA Specialist

## Report Comments

---

Tintina Resources - 1602728

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

March 18, 2016

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B16031159                      Quote ID: B3679  
Project Name: 1603191

Energy Laboratories Inc Billings MT received the following 2 samples for Western Environmental Testing Laboratory on 3/14/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16031159-001	1603191-001, C586-15 P,Q WK:28-WLHCT-0118	03/08/16 9:00	03/14/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA
B16031159-002	1603191-002, C601-15 O,Q WK:28-WLHCT-0119	03/08/16 9:00	03/14/16	Aqueous	Same As Above

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/15/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509367

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

September 29, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15091781  
Project Name: Job ID: 1509367

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/21/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15091781-001	C773-15 B,C Wk:0-WLHCT-0120	09/15/15 9:00	09/21/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509367  
**Lab ID:** B15091781-001  
**Client Sample ID:** C773-15 B,C Wk:0-WLHCT-0120

**Report Date:** 09/29/15  
**Collection Date:** 09/15/15 09:00  
**Date Received:** 09/21/15  
**Matrix:** Aqueous

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>							
Aluminum	0.038	mg/L		0.009		E200.8	09/22/15 20:49 / mas

Phosphorus	0.021	mg/L	L	0.007		E200.7	09/22/15 15:53 / mas
Selenium	ND	mg/L		0.001		E200.8	09/22/15 20:49 / mas
Silicon	0.13	mg/L		0.05		E200.7	09/22/15 15:53 / mas
Silver	ND	mg/L		0.0002		E200.8	09/25/15 16:36 / mas
Thallium	0.0055	mg/L		0.0002		E200.8	09/22/15 20:49 / mas
Uranium	ND	mg/L		0.0002		E200.8	09/22/15 20:49 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
D - RL increased due to sample matrix.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.  
L - Lowest available reporting limit for the analytical method used.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/22/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509579

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 06, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15092576                      Quote ID: B3679

Project Name: Job ID: 1509579

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 9/29/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15092576-001	C773-15 B,C Wk:1-WLHCT-0120	09/22/15 9:00	09/29/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509579  
**Lab ID:** B15092576-001  
**Client Sample ID:** C773-15 B,C Wk:1-WLHCT-0120

**Report Date:** 10/06/15  
**Collection Date:** 09/22/15 09:00  
**Date Received:** 09/29/15  
**Matrix:** Leachate

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Contact and Corrective Action Comments:

Per phone call with Mitchell at Western Environmental Testing Laboratory analyze samples per client history.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 9/29/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1509799

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 12, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15100258                      Quote ID: B3679

Project Name: Job ID: 1509799

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 10/5/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15100258-001	C773-15 B,C WK:2-WHLCT-0120	09/29/15 9:00	10/05/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID: 1509799  
**Lab ID:** B15100258-001  
**Client Sample ID:** C773-15 B,C WK:2-WHLCT-0120

**Report Date:** 10/12/15  
**Collection Date:** 09/29/15 09:00  
**Date Received:** 10/05/15  
**Matrix:** Leachate

Uranium	ND	mg/L		0.0002		E200.8	10/06/15 16:57 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/6/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1510101

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Report Comments

---

Tintina Resources - 1510306

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

October 28, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15101634                      Quote ID: B3679

Project Name: Job ID 1510306

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 10/20/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15101634-001	C773-15 B, C WK: 4 - WLHCT-0120	10/13/15 9:00	10/20/15	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** Job ID 1510306  
**Lab ID:** B15101634-001  
**Client Sample ID:** C773-15 B, C WK: 4 -WLHCT-0120

**Report Date:** 10/28/15  
**Collection Date:** 10/13/15 09:00  
**Date Received:** 10/20/15  
**Matrix:** Leachate

---

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 10/20/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1510524

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 11/10/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1511203

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

November 19, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15111229                      Quote ID: B3679

Project Name: 1511203

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 11/16/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15111229-001	C773-15 B, C WK: 8-WLHCT-0120	11/10/15 9:00	11/16/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Container/Temp Blank temperature:	12.2°C No Ice		
Water - VOA vials have zero headspace?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input checked="" type="checkbox"/>
Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

## Report Comments

---

Tintina Resources - 1511387

---

### Specific Report Comments

Due to a laboratory reanalysis requirement the analysis for Ferrous Iron on sample 1511387-001 was performed past the EPA recommended holding time. We apologize for any inconvenience this may have caused.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/1/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1511700

---

### Specific Report Comments

The result for the continuing calibration verification (CCV) sample during the analysis for pH was outside WETLAB acceptance criteria. Laboratory Control Samples (LCS/LFB) and Duplicate data was however acceptable. The reported data for pH on all samples should be considered estimates. Due to a lack of sample volume reanalysis was not possible. We apologize for any inconvenience this may have caused.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Report Comments

---

Tintina Resources - 1512204

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Analytical Report

Tintina Resources

17 East Main Street

White Sulphur Springs, MT 59645

Attn: Bob Jacko/Katie Seipel/Lisa Kirk

Phone: (406)-547-3466 Fax:

POProject: WLHCT-0120

Date Printed: 12/22/2015

OrderID: 1512204

Customer Sample ID: C773-15 B, C WK: 12

Collect Date/Time: 12/8/2015 09:00

WETLAB Sample ID: 1512204-001

Receive Date: 12/8/2015 09:00

Analyte	Method	Results	Units	DF	RL	Analyzed	LabID
<b>General Chemistry</b>							
Ferrous Iron	SM 3500 Fe B	2.7	mg/L	1	0.1	12/8/2015	NV00925
Ferric Iron	SM 3500 Fe B	41	mg/L	1	0.1	12/10/2015	NV00925
pH	SM 4500-H+ B	3.13	pH Units	1		12/11/2015	NV00925
Temperature at pH	NA	20.9	°C	1		12/11/2015	NV00925
WAD Cyanide	SM 4500CN I, E	ND	mg/L	1	0.010	12/15/2015	NV00925
Redox Potential	ASTM D1498	440	mV	1		12/8/2015	NV00925
Acidity (Titrimetric)	SM 2310B	360	mg/L as CaCO3	1		12/9/2015	NV00925
Total Nitrogen	Calc.	0.76	mg/L	1	0.50	12/15/2015	NV00925
Total Dissolved Solids (TDS)	SM 2540C	670	mg/L	1	10	12/10/2015	NV00925
Electrical Conductivity	SM 2510B	1200	µmhos/cm	1	1	12/8/2015	NV00925
<b>Anions by Ion Chromatography</b>							
Chloride	EPA 300.0	ND	D mg/L	10	5.0	12/10/2015	NV00925
Fluoride	EPA 300.0	ND	D mg/L	10	1.0	12/10/2015	NV00925
Sulfate	EPA 300.0	540	mg/L	10	10	12/10/2015	NV00925
<b>Flow Injection Analyses</b>							
Nitrate + Nitrite Nitrogen	EPA 353.2	0.46	mg/L	5	0.10	12/11/2015	NV00925
Total Kjeldahl Nitrogen	EPA 351.2	ND	mg/L	1	0.40	12/15/2015	NV00925
<b>Trace Metals by ICP-OES</b>							
Barium	EPA 200.7	0.035	mg/L	1	0.0030	12/10/2015	NV00925
Beryllium	EPA 200.7	0.0038	mg/L	1	0.0008	12/10/2015	NV00925
Boron	EPA 200.7	ND	mg/L	1	0.10	12/10/2015	NV00925
Calcium	EPA 200.7	45	mg/L	1	0.50	12/10/2015	NV00925
Chromium	EPA 200.7	0.019	mg/L	1	0.0050	12/10/2015	NV00925
Cobalt	EPA 200.7	4.9	mg/L	1	0.010	12/10/2015	NV00925
Iron	EPA 200.7	43	mg/L	1	0.020	12/10/2015	NV00925
Magnesium	EPA 200.7	24	mg/L	1	0.50	12/10/2015	NV00925
Manganese	EPA 200.7	1.4	mg/L	1	0.0050	12/10/2015	NV00925
Molybdenum	EPA 200.7	ND	mg/L	1	0.020	12/10/2015	NV00925
Potassium	EPA 200.7	ND	mg/L	1	0.50	12/10/2015	NV00925
Sodium	EPA 200.7	ND	mg/L	1	0.50	12/10/2015	NV00925
Strontium	EPA 200.7	0.86	mg/L	1	0.020	12/10/2015	NV00925
Zinc	EPA 200.7	0.73	mg/L	1	0.0080	12/10/2015	NV00925
<b>Trace Metals by ICP-MS</b>							
Copper	EPA 200.8	100	mg/L	1000	2.0	12/16/2015	NV00925

# ANALYTICAL SUMMARY REPORT

December 22, 2015

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B15121077                      Quote ID: B3679  
Project Name: 1512204

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 12/14/2015 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B15121077-001	C773-15 B,C WK:12	12/08/15 9:00	12/14/15	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/15/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1512449

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 12/22/2015. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/5/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1601012

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

January 20, 2016

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B16010578                      Quote ID: B3679  
Project Name: 1601012

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 1/11/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16010578-001	C773-15 B, C WK: 16-WLHCT-0120	01/05/16 9:00	01/11/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** 1601012  
**Lab ID:** B16010578-001  
**Client Sample ID:** C773-15 B, C WK: 16-WLHCT-0120

**Report Date:** 01/20/16  
**Collection Date:** 01/05/16 09:00  
**Date Received:** 01/11/16  
**Matrix:** Aqueous

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By
<b>METALS, DISSOLVED</b>

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/12/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Jennifer Delaney  
QA Specialist

## Report Comments

---

Tintina Resources - 1601183

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 1/26/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1601529

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Tintina Resources - 1602027

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

February 19, 2016

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B16020879                      Quote ID: B3679  
Project Name: 1602027

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 2/10/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16020879-001	1602027-001, C773-15 B,C WK: 20-WLHCT-0120	02/02/16 9:00	02/10/16	Aqueous	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/9/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1602207

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 2/16/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1602358

---

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

## Report Comments

Tintina Resources - 1602532 Amended

### Specific Report Comments

None

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

Dear: Bob Jacko/Katie Seipel/Lisa Kirk

This is to transmit the attached analytical report. The analytical data and information contained therein was generated using specified or selected methods contained in references, such as Standard Methods for the Examination of Water and Wastewater, online edition, Methods for Determination of Organic Compounds in Drinking Water, EPA-600/4-79-020, and Test Methods for Evaluation of Solid Waste, Physical/Chemical Methods (SW846) Third Edition.

The samples were received by WETLAB-Western Environmental Testing Laboratory in good condition on 3/1/2016. Additional comments are located on page 2 of this report.

If you should have any questions or comments regarding this report, please do not hesitate to call.

Sincerely,

Andy Smith  
QA Manager

## Report Comments

---

Tintina Resources - 1602729

---

### Specific Report Comments

None

### Subcontracting Comments

The analysis for various metals was performed by Energy Laboratories of Billings, MT. Their report is attached.

### Report Legend

- B -- Blank contamination; Analyte detected above the method reporting limit in an associated blank.
- D -- Due to the sample matrix dilution was required in order to properly detect and report the analyte. The reporting limit has been adjusted accordingly.
- HT -- Sample analyzed beyond the EPA recommended holding time.
- J -- The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- M -- The matrix spike/matrix spike duplicate (MS/MSD) values for the analysis of this parameter were outside acceptance criteria due to probable matrix interference. The reported result should be considered an estimate.
- N -- There was insufficient sample available to perform a spike and/or duplicate on this analytical batch.
- NC -- Not calculated due to matrix interference or very high sample concentration.
- QD -- The sample duplicate or matrix spike duplicate analysis demonstrated sample imprecision. The reported result should be considered an estimate.
- QL -- The result for the laboratory control sample (LCS) was outside WETLAB acceptance criteria and reanalysis was not possible. The reported data should be considered an estimate.
- S -- Surrogate recovery was outside of laboratory acceptance limits due to matrix interference. The associated blank and LCS surrogate recovery was within acceptance limits.
- SC -- Sample concentration >4X the spike amount; therefore, the spike could not be adequately recovered.
- U -- The analyte was analyzed for, but was not detected above the level of the reported sample reporting/quantitation limit.

### General Lab Comments

Per method recommendation (section 4.4), Samples analyzed by methods EPA 300.0 and EPA 300.1 have been filtered prior to analysis.

The following is an interpretation of the results from EPA method 9223B:

A result of zero (0) indicates absence for both coliform and Escherichia coli meaning the water meets the microbiological requirements of the U.S. EPA Safe Drinking Water Act (SDWA). A result of one (1) for either test indicates presence and the water does not meet the SDWA requirements. Waters with positive tests should be disinfected by a certified water treatment operator and retested.

# ANALYTICAL SUMMARY REPORT

March 15, 2016

Western Environmental Testing Laboratory  
475 E Greg St Ste 119  
Sparks, NV 89431-8517

Work Order: B16030731                      Quote ID: B3679

Project Name: 1602729

Energy Laboratories Inc Billings MT received the following 1 sample for Western Environmental Testing Laboratory on 3/8/2016 for analysis.

Lab ID	Client Sample ID	Collect Date	Receive Date	Matrix	Test
B16030731-001	C773-15 B, C WK: 24-WLHCT-0120, 1602729-001	03/01/16 9:00	03/08/16	Leachate	Metals by ICP/ICPMS, Dissolved Mercury, Dissolved Digestion, Mercury by CVAA

The analyses presented in this report were performed by Energy Laboratories, Inc., 1120 S 27th St., Billings, MT 59101, unless otherwise noted. Any exceptions or problems with the analyses are noted in the Laboratory Analytical Report, the QA/QC Summary Report, or the Case Narrative.

The results as reported relate only to the item(s) submitted for testing.

If you have any questions regarding these test results, please call.

Report Approved By:

### LABORATORY ANALYTICAL REPORT

Prepared by Billings, MT Branch

**Client:** Western Environmental Testing Laboratory  
**Project:** 1602729  
**Lab ID:** B16030731-001  
**Client Sample ID:** C773-15 B, C WK: 24-WLHCT-0120, 1602729-001

**Report Date:** 03/15/16  
**Collection Date:** 03/01/16 09:00  
**Date Received:** 03/08/16  
**Matrix:** Leachate

Analyses	Result	Units	Qualifiers	RL	MCL/ QCL	Method	Analysis Date / By

Uranium	0.0201	mg/L		0.0002		E200.8	03/10/16 12:30 / mas

**Report Definitions:**  
RL - Analyte reporting limit.  
QCL - Quality control limit.  
L - Lowest available reporting limit for the analytical method used.

MCL - Maximum contaminant level.  
ND - Not detected at the reporting limit.

Water - pH acceptable upon receipt?	Yes <input checked="" type="checkbox"/>	No <input type="checkbox"/>	Not Applicable <input type="checkbox"/>

---

## Standard Reporting Procedures:

Lab measurement of analytes considered field parameters that require analysis within 15 minutes of sampling such as pH, Dissolved Oxygen and Residual Chlorine, are qualified as being analyzed outside of recommended holding time.

Solid/soil samples are reported on a wet weight basis (as received) unless specifically indicated. If moisture corrected, data units are typically noted as –dry. For agricultural and mining soil parameters/characteristics, all samples are dried and ground prior to sample analysis.
